Competences and guarantees

DEKRA Certification Inc. is a testing laboratory accredited by A2LA (The American Association for Laboratory Accreditation), to perform the tests indicated in the Certificate 2764.01.

DEKRA Certification Inc. is a testing laboratory competent to carry out the tests described in this report.

In order to assure the traceability to other national and international laboratories, DEKRA Certification Inc. has a calibration and maintenance program for its measurement equipment.

DEKRA Certification Inc. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Certification at the time of performance of the test.

DEKRA Certification Inc. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Certification Inc.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Certification Inc.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Certification Inc. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Certification internal document PODT000.

| Frequency (MHz) | U(k=2) | Units |
|-----------------|--------|-------|
| 30-180 | 3.82 | dB |
| 180-1000 | 2.61 | dB |
| 1000-18000 | 2.92 | dB |
| 18000-40000 | 2.15 | dB |

Data provided by the client

The sample consists of a tablet with Wi-Fi / BT and Cellular connectivity.

DEKRA declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples undergoing test have been selected by: The client.

Sample S/01 is composed of the following elements:

| Control N° | Description | Model | Serial N° | Date of reception |
|------------|------------------|-------------------------|------------|-------------------|
| 2612.04 | AC Adapter Cable | HPI-2918 | 213349-109 | 08/29/2019 |
| 2612.05 | AC Adapter | TPN-TA002 | L45962-007 | 08/29/2019 |
| 2612.06 | Tablet HP Device | EMPIRE-1.0PCGA01ZAS8000 | 000919004D | 08/29/2019 |

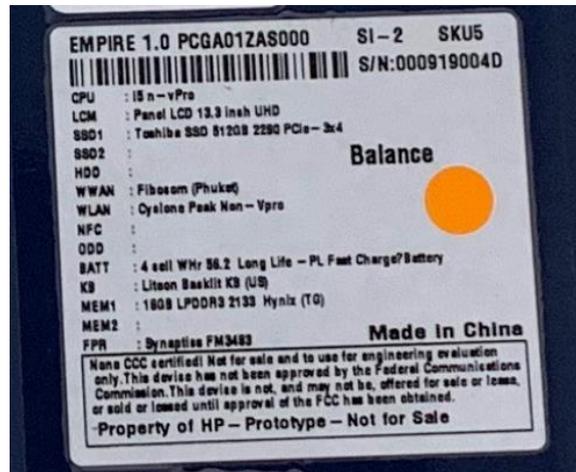

1. Sample S/01 has undergone following test(s):

All Radiated tests indicated in appendix A, B and C.

Identification of the client

HP INC.
 1501 Page Mill Road Palo Alto, CA 94304, USA

Testing period and place

| | |
|---------------|---------------------------|
| Test Location | DEKRA Certification, Inc. |
| Date (start) | 08-29-2019 |
| Date (finish) | 09-04-2019 |

Document history

| Report number | Date | Description |
|---------------|------------|---------------|
| 2612ERM.001 | 09-20-2019 | First release |

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

| | |
|-------------------|-------------------------------------|
| Temperature | Min. = 15 °C Max. = 35 °C |
| Relative humidity | Min. = 30 % Max. = 75 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

In the semi anechoic chamber, the following limits were not exceeded during the test.

| | |
|-------------------|-------------------------------------|
| Temperature | Min. = 15 °C Max. = 35 °C |
| Relative humidity | Min. = 30 % Max. = 75 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

In the chamber for conducted measurements, the following limits were not exceeded during the test:

| | |
|-------------------|-------------------------------------|
| Temperature | Min. = 15 °C Max. = 35 °C |
| Relative humidity | Min. = 30 % Max. = 60 % |
| Air pressure | Min. = 860 mbar Max. = 1060 mbar |

Remarks and comments

The Convertible PC supports UMTS and LTE, without UL carrier aggregation. The applicable frequency bands and operating modes are identified in the following table, where North America bands are shown in bold.

| Mode | Bands | Supports TX Mode | | | |
|----------------|----------------------------------|------------------|-------|-------|----------|
| | | WCDMA | HSDPA | HSUPA | DC-HSDPA |
| WCDMA / HSPA + | FDD I (1920 to 1980 MHz) | X | X | X | X |
| | FDD II (1850 to 1910 MHz) | X | X | X | X |
| | FDD IV (1710 to 1755 MHz) | X | X | X | X |
| | FDD V (824 to 849 MHz) | X | X | X | X |
| | FDD VIII (888 to 915 MHz) | X | X | X | X |

| Mode | Bands | Supports Channel Bandwidth (MHz) | | | | | |
|-----------------------------------|-----------------------------------|----------------------------------|---|---|----|----|----|
| | | 1.4 | 3 | 5 | 10 | 15 | 20 |
| LTE FDD | Band 1 (1920 to 1980 MHz) | | | X | X | X | X |
| | Band 2 (1850 to 1910 MHz) | X | X | X | X | X | X |
| | Band 3 (1710 to 1785 MHz) | X | X | X | X | X | X |
| | Band 4 (1710 to 1755 MHz) | X | X | X | X | X | X |
| | Band 5 (824 to 849 MHz) | X | X | X | X | | |
| | Band 7 (2500 to 2570 MHz) | | | X | X | X | X |
| | Band 8 (880 to 915 MHz) | X | X | X | X | | |
| | Band 12 (699 to 716 MHz) | X | X | X | X | | |
| | Band 13 (777 to 787 MHz) | | | X | X | | |
| | Band 14 (788 to 798 MHz) | | | X | X | | |
| | Band 17 (704 to 716 MHz) | | | X | X | | |
| | Band 18 (815 to 830 MHz) | | | X | X | X | |
| | Band 19 (830 to 845 MHz) | | | X | X | X | |
| | Band 20 (832 to 862 MHz) | | | X | X | X | X |
| | Band 25 (1850 to 1915 MHz) | X | X | X | X | X | X |
| | Band 26 (814 to 849 MHz) | X | X | X | X | X | |
| | Band 28 (703 to 748 MHz) | | X | X | X | X | X |
| | Band 29 (717 to 728 MHz) | | X | X | X | | |
| | Band 30 (2305 to 2315 MHz) | | | X | X | | |
| Band 66 (1710 to 1780 MHz) | X | X | X | X | X | X | |
| LTE TDD | Band 38 (2570 to 2620 MHz) | | | X | X | X | X |
| | Band 39 (1880 to 1920 MHz) | | | X | X | X | X |
| | Band 40 (2300 to 2400 MHz) | | | X | X | X | X |
| | Band 41 (2496 to 2690 MHz) | | | X | X | X | X |
| | Band 42 (3400 to 3600 MHz) | | | X | X | X | X |

The manufacturer declared that the worst cases were 3G II, IV, V and LTE 12, 13, 25, 26, 41, 66.

The tests have been performed by the technical personnel: Poojita Bhattu and Koji Nishimoto.

TEST A.1: RADIATED EMISSIONS

| | | |
|----------------|-------------------|------------------------------------------------------|
| LIMITS: | Product standard: | FCC Part 22 / FCC Part 90 / IC RSS-132. |
| | Test standard: | FCC §2.1053 and §22.917 §90.691 /RSS-132 Clause 5.5. |

LIMITS

According to specification, the power of emissions shall be attenuated below the transmitter power (P) by a factor of at least $43 + 10 \log(P)$ dB. P in watts.

At P_o transmitting power of 2 watts (33 dBm), the specified minimum attenuation becomes $43 + 10 \log(P_o)$. and the level in dBm relative to P_o becomes:

$$P_o \text{ (dBm)} - [43 + 10 \log(P_o \text{ in watts})] = -13 \text{ dBm}$$

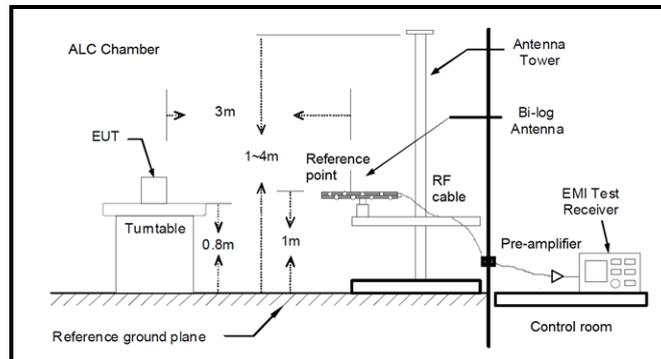

TEST SETUP

The measurement was performed with the EUT inside an anechoic chamber. The spectrum was scanned from 30 MHz to at least the 10th harmonic of the highest frequency generated within the equipment.

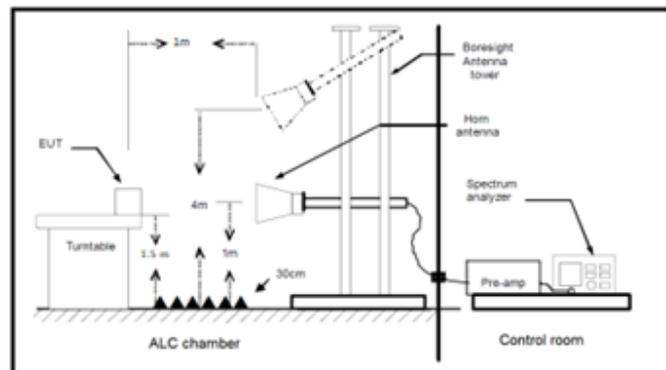

The EUT was placed on a non-conductive stand at a 3-meter distance from the measuring antenna for measurements below 1 GHz and at 1-meter distance for measurements above 1 GHz.

Detected emissions were maximized at each frequency by rotating the EUT and adjusting the measuring antenna height and polarization. The maximum reading was recorded.

Radiated measurements < 1GHz

Radiated measurements > 1GHz

| | |
|---------------------------------|-----------------|
| TESTED SAMPLES: | S/01 |
| TESTED CONDITIONS MODES: | TC#01 (Band 26) |
| TEST RESULTS: | PASS |

RESULTS

A preliminary scan determined the QPSK 10 MHz bandwidth as the worst case. The configuration of Resource Blocks which is the worst case for conducted power was used. The device is tested in both Tablet mode and Notebook mode to determine the worst-case mode.

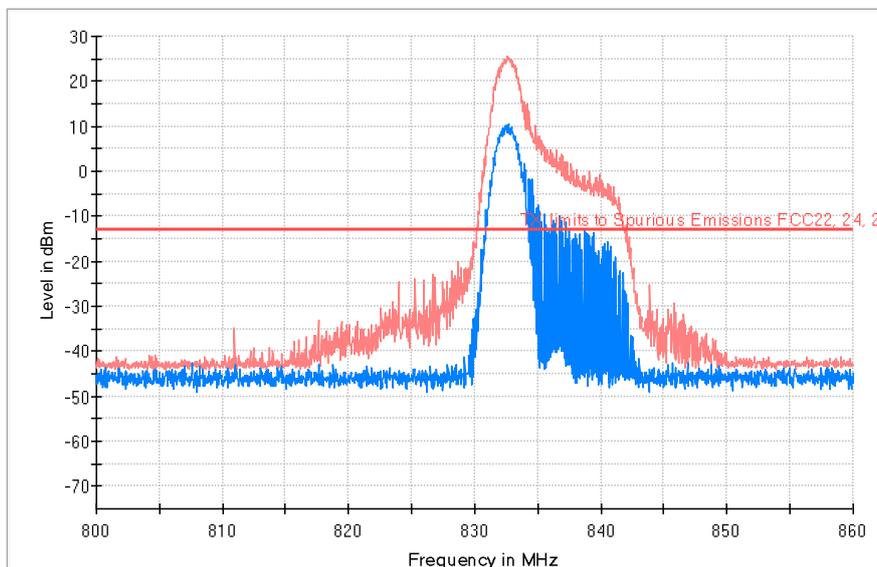

The following plots show the results for this configuration.

Spurious signal detected were more than 20dB below the reference limit.

LTE QPSK MODULATION. RB = 1. Offset = 0. BW = 10 MHz

| TEST RESULTS: | PASS |

RESULTS

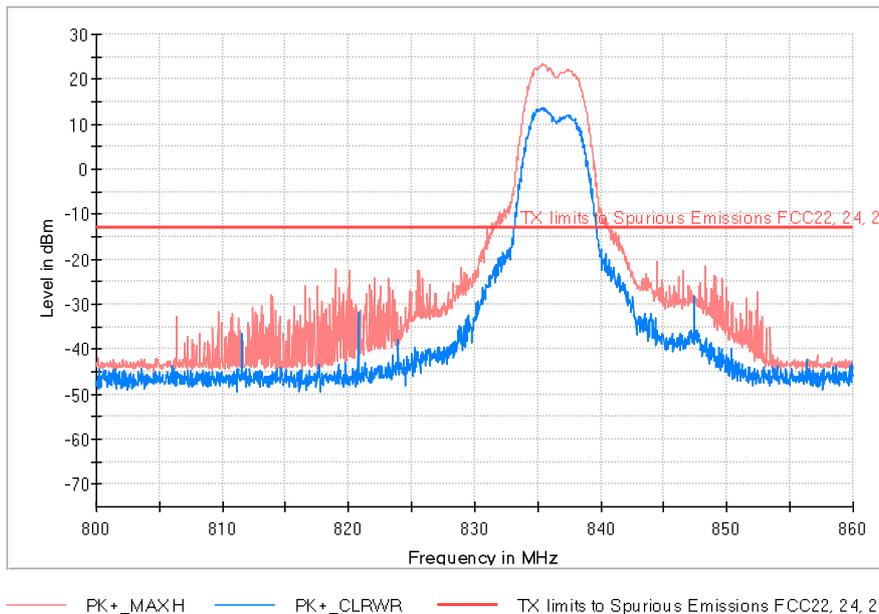

A preliminary scan determined the WCDMA QPSK modulation as the worst case. The device is tested in both Tablet mode and Notebook mode to determine the worst-case mode.

The following plots show the results for this configuration.

Spurious signal detected were more than 20dB below the reference limit.

TEST B.1: RADIATED EMISSIONS

| | | |
|----------------|-------------------|---------------------------------------------|
| LIMITS: | Product standard: | FCC Part 24 / IC RSS-133 |
| | Test standard: | FCC §2.1053 and §24.238 /RSS-133 Clause 6.6 |

LIMITS

According to specification, the power of emissions shall be attenuated below the transmitter power (P) by a factor of at least $43 + 10 \log (P)$ dB. P in watts.

At P_o transmitting power of 2 watts (33 dBm), the specified minimum attenuation becomes $43+10\log (P_o)$. and the level in dBm relative to P_o becomes:

$$P_o \text{ (dBm)} - [43 + 10 \log (P_o \text{ in watts})] = -13 \text{ dBm}$$

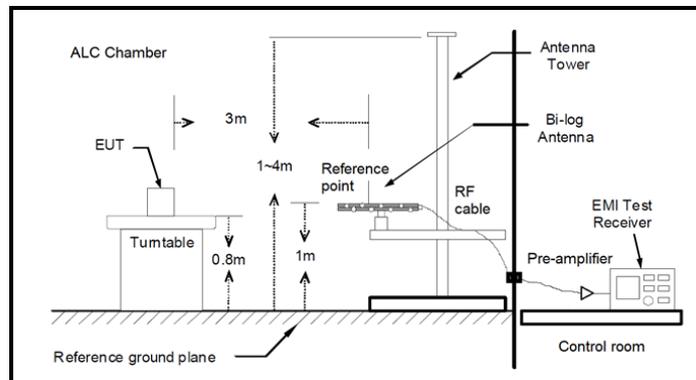

TEST SETUP

The measurement was performed with the EUT inside an anechoic chamber. The spectrum was scanned from 30 MHz to at least the 10th harmonic of the highest frequency generated within the equipment.

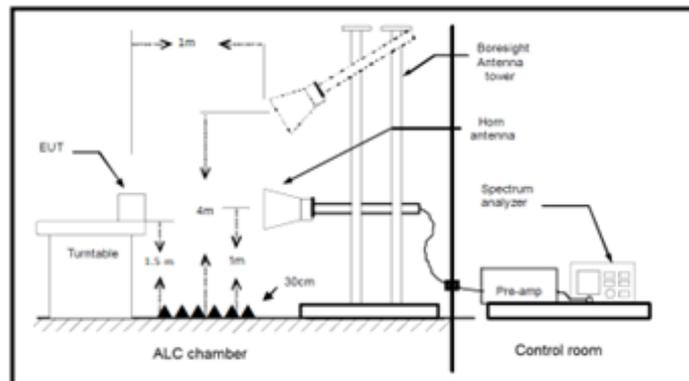

The EUT was placed on a non-conductive stand at a 3-meter distance from the measuring antenna for measurements below 1 GHz and at 1-meter distance for measurements above 1 GHz.

Detected emissions were maximized at each frequency by rotating the EUT and adjusting the measuring antenna height and polarization. The maximum reading was recorded.

Radiated measurements < 1GHz

Radiated measurements > 1GHz

| | |
|---------------------------------|-----------------|
| TESTED SAMPLES: | S/01 |
| TESTED CONDITIONS MODES: | TC#01 (Band 25) |
| TEST RESULTS: | PASS |

RESULTS

A preliminary scan determined the QPSK 20 MHz bandwidth as the worst case. The configuration of Resource Blocks which is the worst case for conducted power was used. The device was tested in both Tablet mode and Notebook mode to determine the worst-case mode.

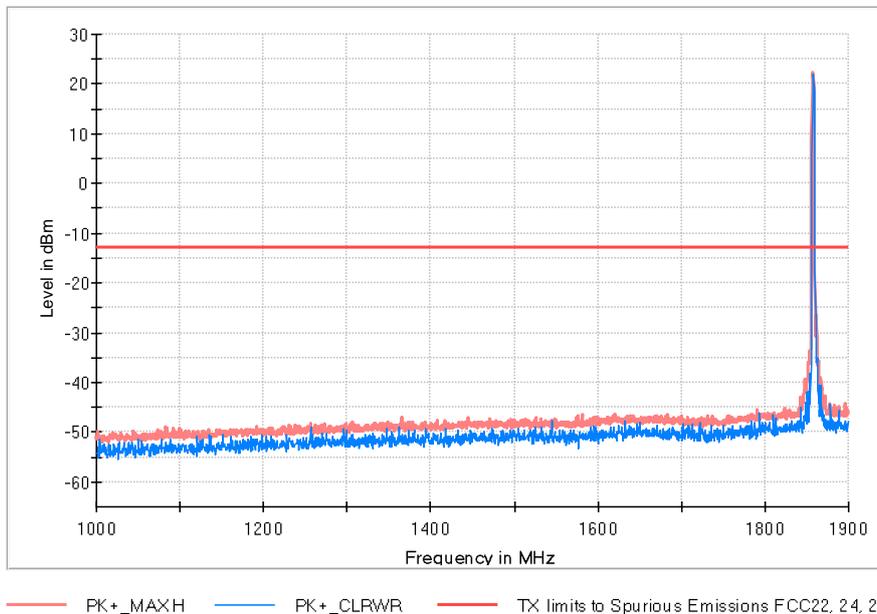

The following plots show the results for the following configuration.

LTE QPSK MODULATION. RB = 1. Offset = 0. BW = 20 MHz

Spurious signal detected were more than 20dB below the reference limit.

TEST C.1: RADIATED EMISSIONS

| | | |
|----------------|-------------------|-----------------------------------------------------------------------------------------|
| LIMITS: | Product standard: | FCC Part 27 / IC RSS-130, 199 and 139 |
| | Test standard: | FCC §2.1053 and §27.53 / RSS-130 Clause 4.7 and RSS-139 Clause 6.6 / RSS-199 Clause 4.5 |

LIMITS

According to specification, the power of emissions shall be attenuated below the transmitter power (P) by a factor of at least $43 + 10 \log(P)$ dB. P in watts.

At P_o transmitting power of 2 watts (33 dBm), the specified minimum attenuation becomes $43 + 10 \log(P_o)$. and the level in dBm relative to P_o becomes:

$$P_o \text{ (dBm)} - [43 + 10 \log(P_o \text{ in watts})] = -13 \text{ dBm}$$

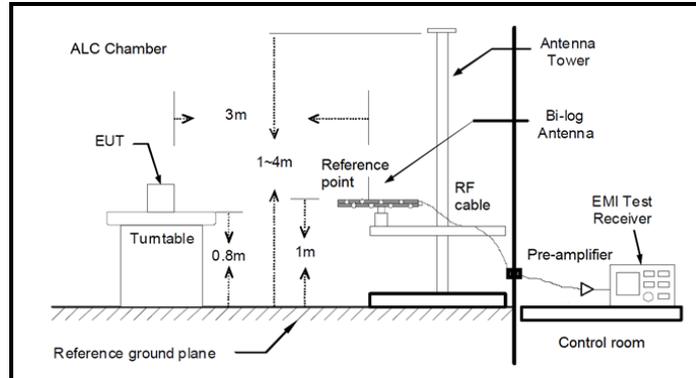

TEST SETUP

The measurement was performed with the EUT inside an anechoic chamber. The spectrum was scanned from 30 MHz to at least the 10th harmonic of the highest frequency generated within the equipment.

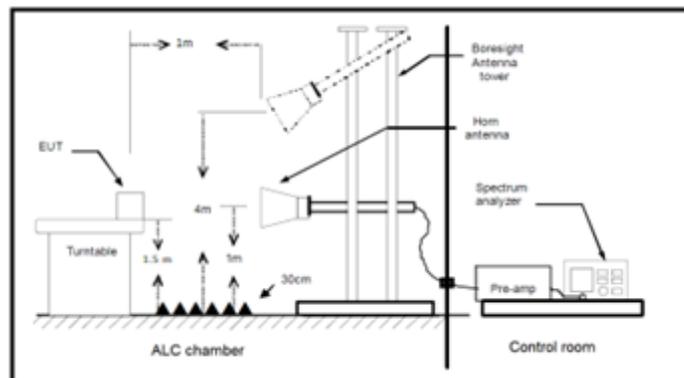

The EUT was placed on a non-conductive stand at a 3-meter distance from the measuring antenna for measurements below 1 GHz and at 1-meter distance for measurements above 1 GHz.

Detected emissions were maximized at each frequency by rotating the EUT and adjusting the measuring antenna height and polarization. The maximum reading was recorded.

Radiated measurements < 1GHz

Radiated measurements > 1GHz

|---------------------------------|-----------------|
| TESTED SAMPLES: | S/01 |
| TESTED CONDITIONS MODES: | TC#01 (Band 12) |
| TEST RESULTS: | PASS |

RESULTS

A preliminary scan determined the QPSK 5 MHz bandwidth as the worst case. The configuration of Resource Blocks which is the worst case for conducted power was used. The device is tested in both Tablet mode and Notebook mode to determine the worst-case mode.

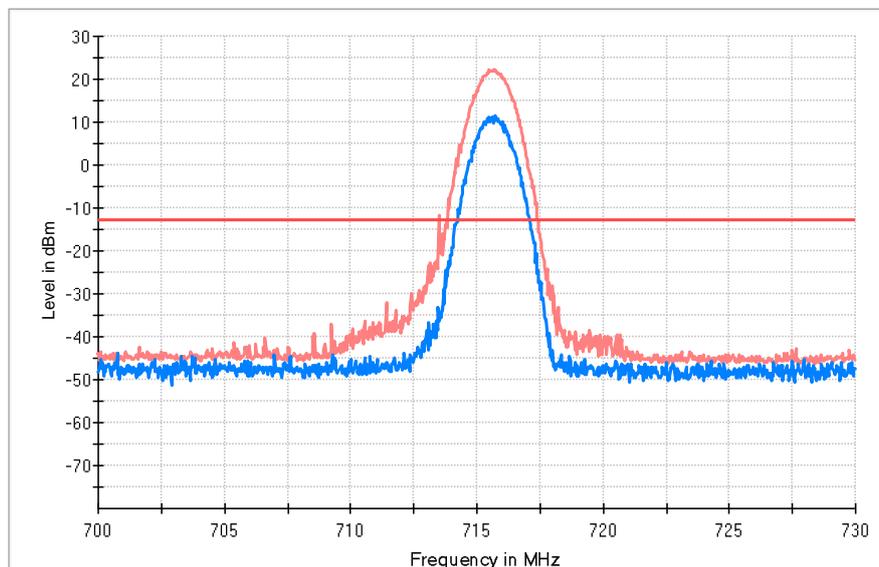

The following plots show the results for the following configuration.

LTE QPSK MODULATION. RB = 1. Offset = 0. BW = 5 MHz

Spurious signal detected were more than 20dB below the reference limit.
