

# **FCC Test Report**

# (PART 27)

Report No.: RF190516C01-10

FCC ID: B94HNQ20PK

Test Model: HSN-Q20C

Received Date: May 16, 2019

Test Date: May 28 ~ Jun. 18, 2019

**Issued Date:** Jun. 26, 2019

Applicant: HP Inc.

Address: 3390 East Harmony Road, Fort Collins, Colorado 80528, United States

Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch

Lab Address: No. 47-2, 14th Ling, Chia Pau Vil., Lin Kou Dist., New Taipei City, Taiwan

(R.O.C)

Test Location: No. 19, Hwa Ya 2nd Rd, Wen Hwa Vil, Kwei Shan Dist., Taoyuan City

33383, Taiwan (R.O.C)

FCC Registration /

788550 / TW0003

**Designation Number:** 

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification. The report must not be used by the client to claim product certification, approval, or endorsement by TAF or any government agencies

## 1 Certificate of Conformity

**Product:** Notebook Computer

Brand: HP

Test Model: HSN-Q20C

Sample Status: Engineering Sample

Applicant: HP Inc.

**Test Date:** May 28 ~ Jun. 18, 2019

Standards: FCC Part 27, Subpart C, D

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's RF characteristics under the conditions specified in this report.

## 2 Summary of Test Results

|                       | Applied Standard: FCC Part 27 & Part 2 |        |   |  |  |  |  |  |  |  |
|-----------------------|--|--------|---|--|--|--|--|--|--|--|
| FCC<br>Clause         | Test Item                              | Result | Remarks   |  |  |  |  |  |  |  |
| 2.1046<br>27.50(a)(3) | Equivalent Isotropic Radiated<br>Power | Pass   | Meet the requirement of limit.  |  |  |  |  |  |  |  |
| 2.1047                | Modulation Characteristics             | Pass   | Meet the requirement.   |  |  |  |  |  |  |  |
| 2.1055<br>27.54       | Frequency Stability                    | Pass   | Meet the requirement of limit.  |  |  |  |  |  |  |  |
| 2.1049<br>27.53(a)(5) | Occupied Bandwidth                     | Pass   | Meet the requirement of limit.  |  |  |  |  |  |  |  |
| 2.1051<br>27.53(a)(4) | Band Edge Measurements                 | Pass   | Meet the requirement of limit.  |  |  |  |  |  |  |  |
| 2.1051<br>27.53(a)(4) | Conducted Spurious Emissions           | Pass   | Meet the requirement of limit.  |  |  |  |  |  |  |  |
| 2.1053<br>27.53(a)(4) | Radiated Spurious Emissions            | Pass   | Meet the requirement of limit. Minimum passing margin is -3.92 dB at 30.97 MHz. |  |  |  |  |  |  |  |

Note: Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

# 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

| Measurement                     | Frequency          | Expanded Uncertainty (k=2) (±) |
|---------------------------------|--------------------|--------------------------------|
|                                 | 9 kHz ~ 30 MHz     | 3.04 dB                        |
| Radiated Emissions up to 1 GHz  | 30 MHz ~ 200 MHz   | 2.93 dB                        |
|                                 | 200 MHz ~ 1000 MHz | 2.95 dB                        |
| Radiated Emissions above 1 GHz  | 1 GHz ~ 18 GHz     | 2.26 dB                        |
| Radiated Effissions above 1 GHZ | 18 GHz ~ 40 GHz    | 1.94 dB                        |

#### Note:

- 1. The WWAN module (Brand: Fibocom, Model: L860-GL) was installed in the EUT.
- 2. The EUT contains following accessory devices.

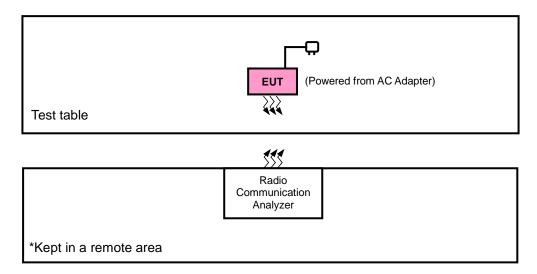

| Product | Brand | Model    | Description   |
|---------|-------|----------|---|
| Adapter | hp    | TPN-TA02 | I/P: 100-240 Vac, 50-60 Hz, 1.6 A<br>O/P: 5 Vdc, 3 A or 9 Vdc, 3 A or 12<br>Vdc, 5 A or 15 Vdc, 4.33 A or 20 Vdc,<br>3.25 A |

3. The above EUT information is declared by manufacturer and for more detailed features description, please refers to the manufacturer's specifications or user's manual.

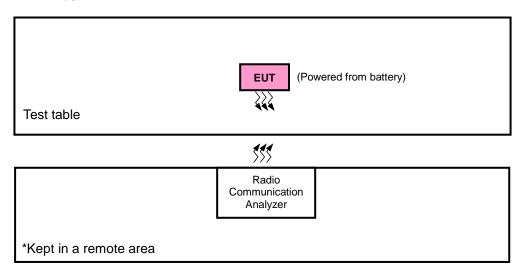

# 3.2 Configuration of System Under Test

## <Radiated Emission Test>

## <E.I.R.P. Test>

# 3.2.1 **Description of Support Units**

The EUT has been tested as an independent unit together with other necessary accessories or support units.

## 3.3 Test Mode Applicability and Tested Channel Detail

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis and NB mode, and antenna ports

The worst case was found when positioned on NB mode for EIRP and NB mode for radiated emission. Following channel(s) was (were) selected for the final test as listed below:

| EUT<br>Configure<br>Mode | Test Item                     | Available<br>Channel | Tested Channel      | Channel<br>Bandwidth | Modulation            | Mode                |
|--------------------------|-------------------------------|----------------------|---------------------|----------------------|-----------------------|---------------------|
|                          | EIRP                          | 27685 to 27735       | 27685, 27710, 27735 | 5 MHz                | QPSK, 16QAM,<br>64QAM | 1 RB / 24 RB Offset |

| -                        | Band Edge                     | 27710                | 27710               | 10 MHz               | QPSK, 16QAM           | 50 RB / 0 RB Offset |
|                          | Conducted                     | 27685 to 27735       | 27685, 27710, 27735 | 5 MHz                | QPSK                  | 1 RB / 24 RB Offset |
| _                        | Emission                      | 27710                | 27710               | 10 MHz               | QPSK                  | 1 RB / 49 RB Offset |
|                          | Radiated                      | 27685 to 27735       | 27685, 27710, 27735 | 5 MHz                | QPSK                  | 1 RB / 24 RB Offset |
| -                        | Emission                      | 27710                | 27710               | 10 MHz               | QPSK                  | 1 RB / 49 RB Offset |

**Note:** This device was tested under all bandwidths, RB configurations and modulations. The worst case was found in QPSK modulation.

## **Test Condition:**

| Test Item                  | Environmental Conditions | Input Power    | Tested By  |
|----------------------------|--------------------------|----------------|------------|
| EIRP                       | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Thomas Wei |
| Modulation Characteristics | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Wayne Lin  |
| Frequency Stability        | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Wayne Lin  |
| Occupied Bandwidth         | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Wayne Lin  |
| Band Edge                  | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Wayne Lin  |
| Conducted Emission         | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Wayne Lin  |
| Radiated Emission          | 25 deg. C, 65 % RH       | 120 Vac, 60 Hz | Thomas Wei |

## 3.4 EUT Operating Conditions

The EUT makes a call to the communication simulator. The communication simulator station system controlled a EUT to export maximum output power under transmission mode and specific channel frequency

## 3.5 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

FCC 47 CFR Part 2 FCC 47 CFR Part 27 KDB 971168 D01 Power Meas License Digital Systems v03r01 ANSI/TIA/EIA-603-E 2016 ANSI 63.26-2015

**NOTE:** All test items have been performed and recorded as per the above standards.

#### 4 Test Types and Results

## 4.1 Output Power Measurement

#### 4.1.1 Limits of Output Power Measurement

Mobile and portable stations. (i) For mobile and portable stations transmitting in the 2305-2315 MHz band or the 2350-2360 MHz band, the average EIRP must not exceed 50 milliwatts within any 1 megahertz of authorized bandwidth, except that for mobile and portable stations compliant with 3GPP LTE standards or another advanced mobile broadband protocol that avoids concentrating energy at the edge of the operating band the average EIRP must not exceed 250 milliwatts within any 5 megahertz of authorized bandwidth but may exceed 50 milliwatts within any 1 megahertz of authorized bandwidth. For mobile and portable stations using time division duplexing (TDD) technology, the duty cycle must not exceed 38 percent in the 2305-2315 MHz and 2350-2360 MHz bands. Mobile and portable stations using FDD technology are restricted to transmitting in the 2305-2315 MHz band. Power averaging shall not include intervals in which the transmitter is off.

#### 4.1.2 Test Procedures

#### **EIRP Measurement:**

- a. All measurements were done at low, middle and high operational frequency range. RBW is 5 MHz and VBW is 15 MHz for LTE mode.
- b. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8 m (below or equal 1 GHz) and/or 1.5 m (above 1 GHz) height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1 m to 4 m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- c. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a tx cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step b. Record the power level of S.G.
- d. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.

#### **Conducted Power Measurement:**

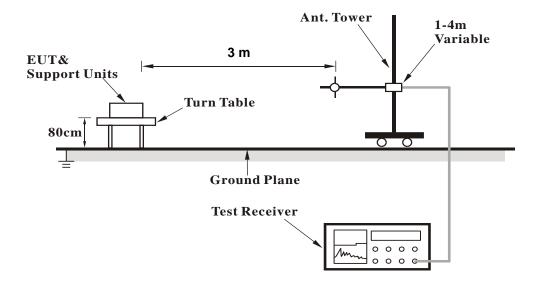

- a. The EUT was set up for the maximum power with LTE link data modulation and link up with simulator.
- b. Set the EUT to transmit under low, middle and high channel and record the power level shown on simulator.

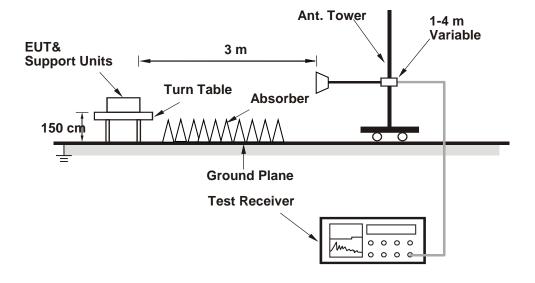

#### 4.1.3 Test Setup

#### **EIRP / ERP Measurement:**

## <Radiated Emission below or equal 1 GHz>

#### <Radiated Emission above 1 GHz>

For the actual test configuration, please refer to the attached file (Test Setup Photo).

#### **Conducted Power Measurement:**

Note: EIRP (dBm) = Reading (dBm) + Correction Factor (dB)

#### **4.2 Modulation Characteristics Measurement**

4.2.1 Limits of Modulation Characteristics

N/A

4.2.2 Test Setup

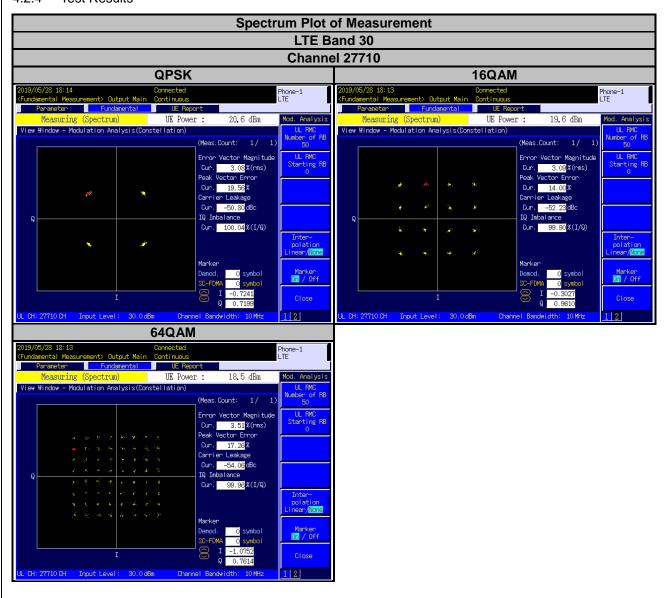

## 4.2.3 Test Procedure

Connect the EUT to Communication Simulator via the antenna connector. The frequency band is set as EUT supported Modulation and Channels, the EUT output is matched with 50 ohm load, the waveform quality and constellation of the EUT was tested.

## 4.2.4 Test Results

## 4.3 Frequency Stability Measurement

#### 4.3.1 Limits of Frequency Stability Measurement

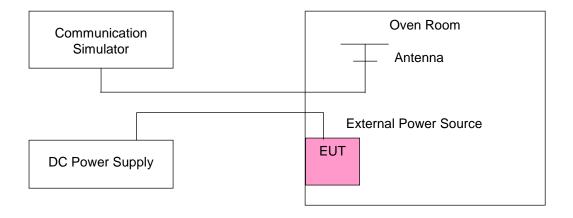

The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

#### 4.3.2 Test Procedure

- a. Device is placed at the oven room. The oven room could control the temperatures and humidity. Power warm up is at least 15 min and power applied should perform before recording frequency error.
- b. EUT is connected the external power supply to control the DC input power. The test voltage range is from minimum to maximum working voltage. Each step shall be record the frequency error rate.
- c. The temperature range step is 10 degrees in this test items. All temperature levels shall be hold the  $\pm 0.5$ °C during the measurement testing. The each temperature step shall be at least 0.5 hours, consider the EUT could be test under the stability condition.

**Note:** The frequency error was recorded frequency error from the communication simulator.

#### 4.3.3 Test Setup

## 4.3.4 Test Results

## 4.4 Occupied Bandwidth Measurement

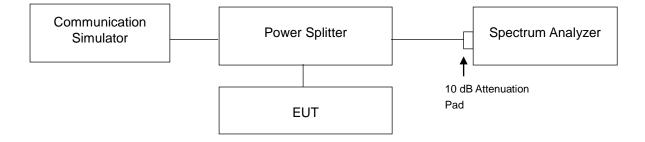

#### 4.4.1 Limits of Occupied Bandwidth Measurement

The width of a frequency band such that, below the lower and above the upper frequency limits, the mean powers emitted are each equal to a specified percentage 0.5 % of the total mean power of a given emission.

#### 4.4.2 Test Procedure

- a. The conducted occupied bandwidth used the power splitter via EUT RF power connector between simulation base station and spectrum analyzer.
- b. Use OBW measurement function of Spectrum analyzer to measure 99 % occupied bandwidth.

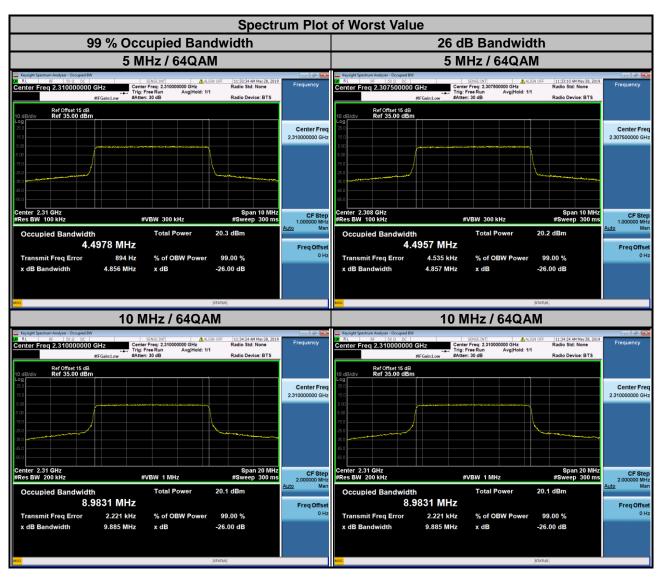

## 4.4.3 Test Setup

## 4.4.4 Test Result

#### 4.5 Band Edge Measurement

#### 4.5.1 Limits of Band Edge Measurement

According to FCC 27.53(a) (4) For mobile and portable stations operating in the 2305-2315 MHz and 2350-2360 MHz bands:

- (i) By a factor of not less than: 43 + 10 log (P) dB on all frequencies between 2305 and 2320 MHz and on all frequencies between 2345 and 2360 MHz that are outside the licensed band(s) of operation, not less than 55 + 10 log (P) dB on all frequencies between 2320 and 2324 MHz and on all frequencies between 2341 and 2345 MHz, not less than 61 + 10 log (P) dB on all frequencies between 2324 and 2328 MHz and on all frequencies between 2337 and 2341 MHz, and not less than 67 + 10 log (P) dB on all frequencies between 2328 and 2337 MHz;
- (ii) By a factor of not less than 43 + 10 log (P) dB on all frequencies between 2300 and 2305 MHz, 55 + 10 log (P) dB on all frequencies between 2296 and 2300 MHz, 61 + 10 log (P) dB on all frequencies between 2292 and 2296 MHz, 67 + 10 log (P) dB on all frequencies between 2288 and 2292 MHz, and 70 + 10 log (P) dB below 2288 MHz;
- (iii) By a factor of not less than 43 + 10 log (P) dB on all frequencies between 2360 and 2365 MHz, and not less than 70 + 10 log (P) dB above 2365 MHz.

#### 4.5.2 Test Setup

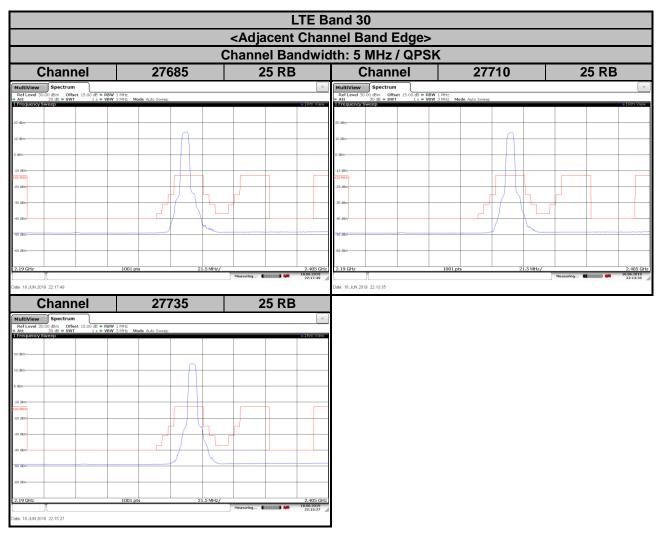

#### 4.5.3 Test Procedures

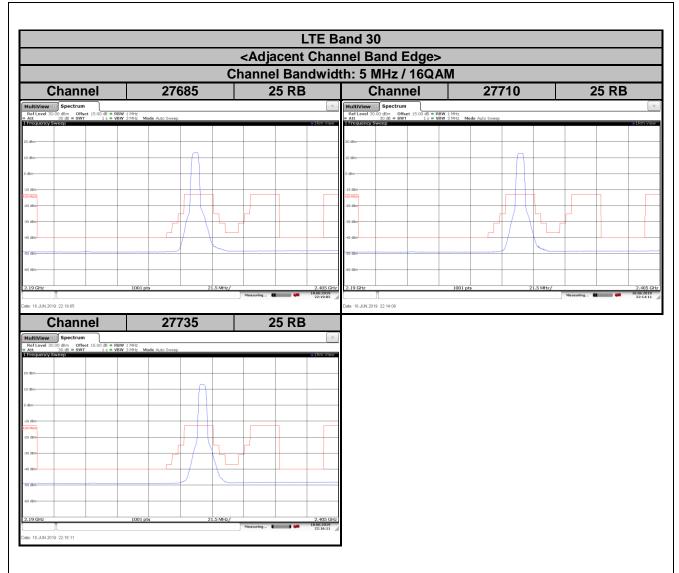

- a. The EUT was set up for the maximum peak power with LTE link data modulation. The power was measured with R&S Spectrum Analyzer. All measurements were done at 2 channels (low and high operational frequency range).
- b. The band edge measurement used the power splitter via EUT RF power connector between simulation base station and spectrum analyzer.
- c. Measuring frequency range is from 2200 MHz to 2395 MHz. 10 dB attenuation pad is connected with spectrum. RBW = 1 MHz and VBW = 3 MHz are used for conducted emission measurement.
- d. Record the max trace plot into the test report.

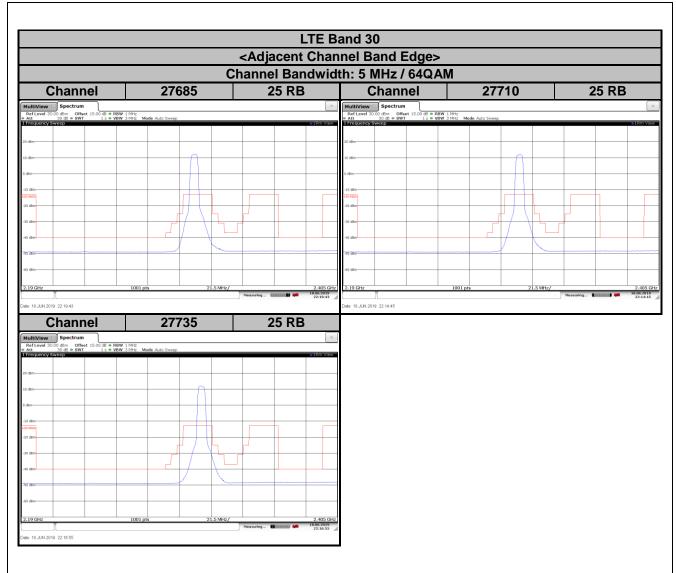

## 4.5.4 Test Results

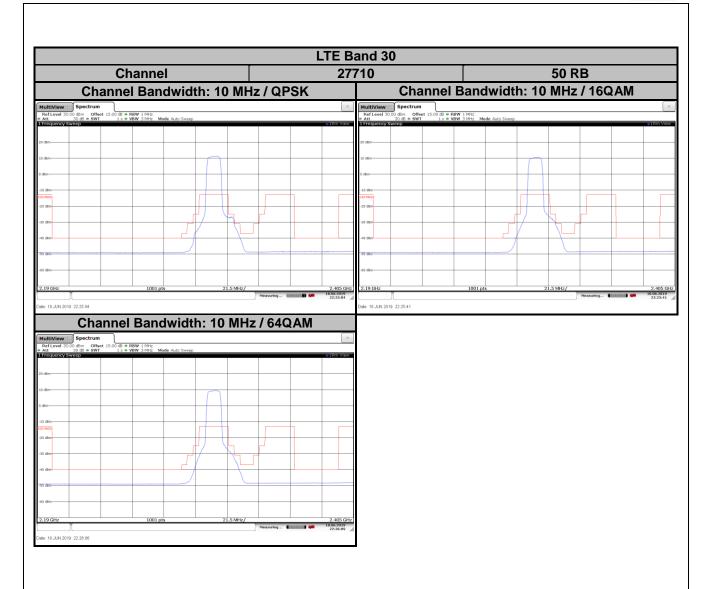

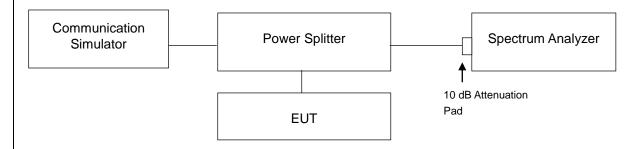

## 4.6 Conducted Spurious Emissions

#### 4.6.1 Limits of Conducted Spurious Emissions Measurement

The power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) by at least 70 +10 log (P) dB. The limit of emission is equal to -40 dBm.

#### 4.6.2 Test Setup

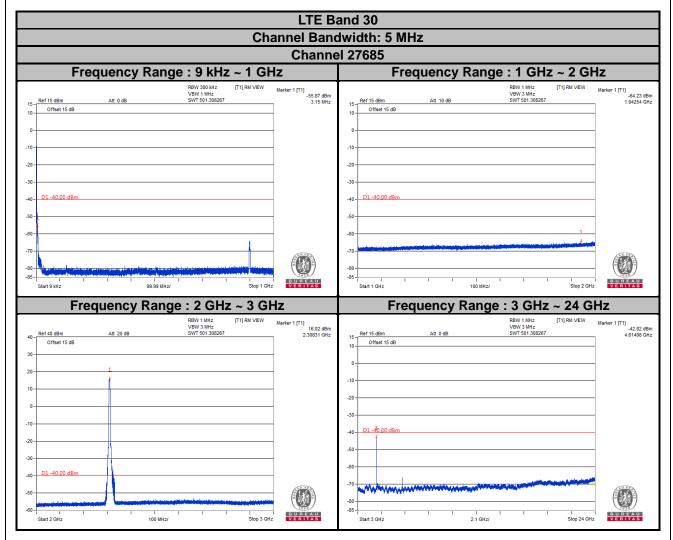

#### 4.6.3 Test Procedure

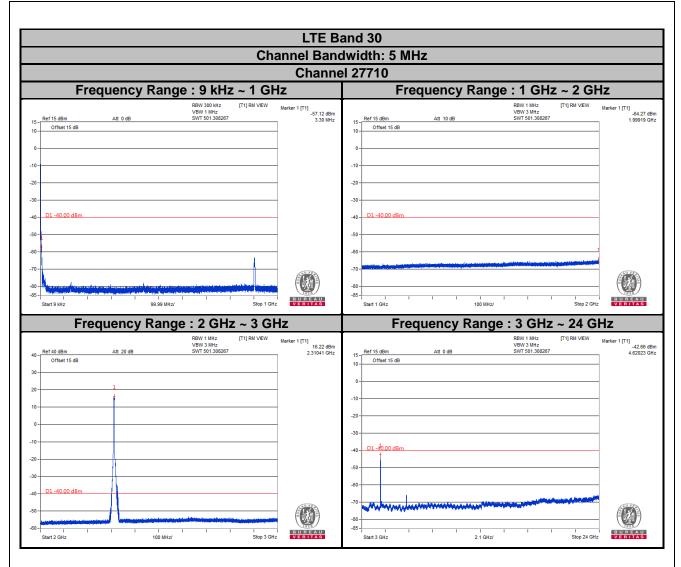

- a. The EUT makes a phone call to the communication simulator. All measurements were done at low, middle and high operational frequency range.
- b. Measuring frequency range is from 9 kHz to 1 GHz. 10 dB attenuation pad is connected with spectrum. RBW = 300 kHz and VBW = 1 MHz are used for conducted emission measurement.
- c. Measuring frequency range is from 1 GHz to 24 GHz. 10 dB attenuation pad is connected with spectrum. RBW = 1 MHz and VBW = 3 MHz are used for conducted emission measurement.

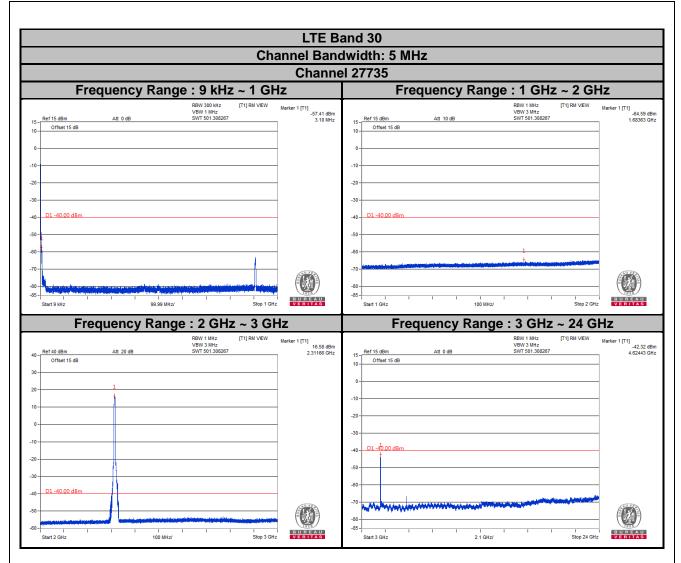

## 4.6.4 Test Results

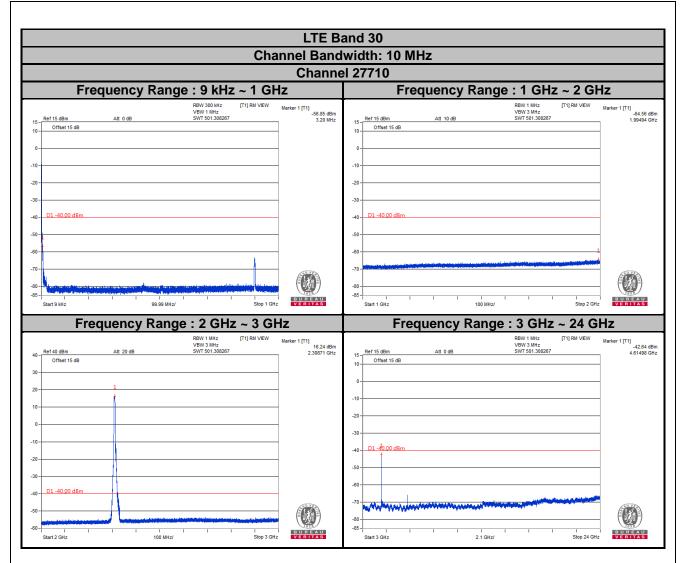

#### 4.7 Radiated Emission Measurement

#### 4.7.1 Limits of Radiated Emission Measurement

The power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) by at least 70 +10 log (P) dB. The limit of emission is equal to -40 dBm.

#### 4.7.2 Test Procedure

- a. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8 m (below or equal 1 GHz) and/or 1.5 m (above 1 GHz) height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1 m to 4 m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- b. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a TX cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step a. Record the power level of S.G
- c. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.
- d. E.R.P power can be calculated form E.I.R.P power by subtracting the gain of dipole, E.R.P power = E.I.R.P power 2.15 dB.

Note: The resolution bandwidth of spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz.

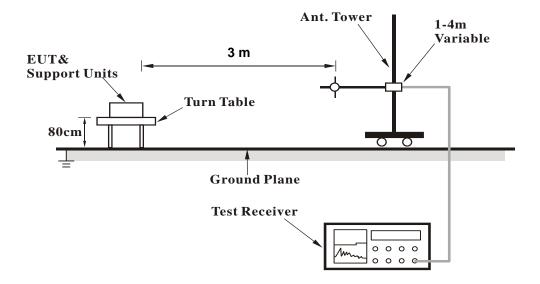

# 4.7.3 Deviation from Test Standard

No deviation.

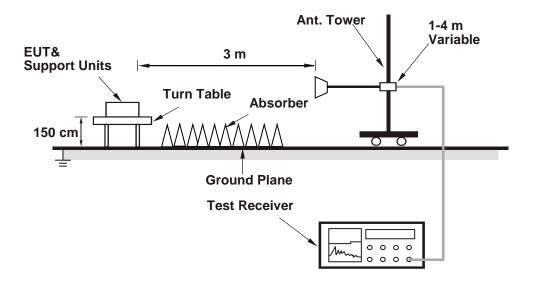

## 4.7.4 Test Setup

## <Radiated Emission below or equal 1 GHz>

## <Radiated Emission above 1 GHz>

For the actual test configuration, please refer to the attached file (Test Setup Photo).
