

Correspondence Summary Q & A

December 14, 2005

SUBJECT: HEWLETT-PACKARD COMPANY PROCURVE NETWORKING -
FCC ID: B94RSVLC-0505

TCB question:

Users manual for the metal enclosure: Professional installation is also required for other antennas, as the output power was reduced for each antenna according to the test report. Please include a power "table" for all antennas (specify model #, type, and gain), so the installer knows the maximum power for a specific antenna installation.

Answer from Applicant:

Only antenna 4 is N-type connector, so only this antenna needs professional installation. USI will pack one special antenna in the package and the EUT will be tuned to the power listed on the report. The user can not tune the power by themselves. For example, if the package has one EUT and antenna 7, the power on the EUT has been tuned to the power of antenna 7 listed in the report, so it is not necessary for professional installation except antenna 4.
