SUBJECT: Class II Permissive Change for FCC ID: **B94-RTL8852BER**

This is to request a Class II permissive change for module approval FCC ID: **B94-RTL8852BER**, granted on **10/20/2022**. The intention of this change is to address the RF exposure compliance for U-NII-4 band in the host platform **HP Notebook PC, TPN-W155**.

The module installed into host platform mentioned above is electronically and mechanically identical to the original certified module. The Original FCC testing on module under FCC ID: **B94-RTL8852BER** was performed with an antenna of higher gain, and the antenna was connected to the module in an open environment. The current host platform under application uses an antenna of the same type but of lower gain and is installed inside the host platform enclosure. The physical restraints introduced by the host platform should have resulted in equal or lower level of radiated emission. Therefore, additional Radiated emission testing is not necessary. Software security remains unchanged from the original application.

Except for the change above, the design, hardware and implementation are exactly same with original.

Sincerely yours,

A handwritten signature in black ink that reads 'Liang Rong Chiao'. The signature is written in a cursive style and is positioned above a horizontal line.
