

The reasons for not putting FCC/IC TA info on the product label

| | |
|---|---|
|  | <ul style="list-style-type: none"> - Models OTE120R/OTE120L are very small and curved. - Due to the surface treatment of OTE120R/OTE120L, it is more complex to do printing and due to this the scrap will increase significantly and make it unreasonable expensive to print on the headset - FCC ID/IC ID will be included in the printed user manual and on the outer surface of the product box, - Marking on top surface would ruin the product design in a way so that the product would not be attractive to customers |
|  | <p>OTE120R/OTE120L will use accompanying app (Jabra Sport life app) with cell phone (evidence as attached below). E labeling will be extended to devices with a cell phone screen, which can display the regulatory info (such as the FCC /IC identification number, TELEC mark and ID, safety warnings etc.). The use of electronic labelling rather than permanent physical labels reduces costs for manufacturers as well.</p> |

The following pages shows the way through the App menu (About -> Technical info -> Regulatory information).

This guidance will be added to the online documentation for Elite 75t.
