|  |

UL Verification Services Inc. tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.

This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST, any agency of the Federal Government, or any agency of the U.S. government.

#### 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with the following:

- ANSI C63.26:2015
- FCC CFR 47 Part 2, Part 22, Part 24, Part 27 and Part 90
- FCC KDB 971168 D01 v03r01: Power Meas License Digital Systems
- FCC KDB 971168 D02 v02r01: Misc Rev Approv License Devices
- FCC KDB 412172 D01 v01r01. Determining ERP and EIRP
- ISED RSS-GEN Issue 5, RSS-132 Issue 3, RSS-133 Issue 6, RSS-139 Issue 3.

### 3. FACILITIES AND ACCREDITATION

UL Verification Services Inc. is accredited by A2LA, certification #0751.05, for all testing performed within the scope of this report. Testing was performed at the locations noted below.

### 4. DECISION RULES AND MEASUREMENT UNCERTAINTY

#### 4.1. METROLOGICAL TRACEABILITY

All test and measuring equipment utilized to perform the tests documented in this report are calibrated on a regular basis, with a maximum time between calibrations of one year or the manufacturers' recommendation, whichever is less, and where applicable is traceable to recognized national standards.

#### 4.2. **DECISION RULES**

The Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4:2012 Clause 8.2. (Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

#### 4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

| PARAMETER   | U <sub>Lab</sub> |
|---|------------------|
| Worst Case Radiated Disturbance, 9KHz to 30 MHz     | 2.87 dB          |
| Worst Case Radiated Disturbance, 30 to 1000 MHz     | 6.01 dB          |
| Worst Case Radiated Disturbance, 1000 to 18000 MHz  | 4.73 dB          |
| Worst Case Radiated Disturbance, 18000 to 26000 MHz | 4.51 dB          |
| Worst Case Radiated Disturbance, 26000 to 40000 MHz | 5.29 dB          |
| Occupied Channel Bandwidth                          | ±1.22 %          |
| Temperature   | ±2.26%           |
| Supply voltages                                     | ±0.57 %          |
| Time  | ±3.39 %          |

Uncertainty figures are valid to a confidence level of 95%.

#### SAMPLE CALCULATION 4.4.

#### **RADIATED EMISSIONS**

Where relevant, the following sample calculation is provided:

Field Strength (dBuV/m) = Measured Voltage (dBuV) + Antenna Factor (dB/m) + Cable Loss (dB) - Preamp Gain (dB)

36.5 dBuV + 18.7 dB/m + 0.6 dB - 26.9 dB = 28.9 dBuV/m

#### **MAINS CONDUCTED EMISSIONS**

Where relevant, the following sample calculation is provided:

Final Voltage (dBuV) = Measured Voltage (dBuV) + Cable Loss (dB) + Limiter Factor (dB) + LISN Insertion Loss.  $36.5 \, dBuV + 0 \, dB + 10.1 \, dB + 0 \, dB = 46.6 \, dBuV$

# 5. EQUIPMENT UNDER TEST

#### 5.1. DESCRIPTION OF EUT

The Apple iPhone is a smartphone with multimedia functions (music, application support, and video), cellular GSM, GPRS, EGPRS, UMTS, LTE, 5G, CDMA, IEEE 802.11a/b/g/n/ac/ax, Bluetooth, Ultra-Wideband, GPS, and NFC. All models support at least one UICC based SIM. The second SIM is either an UICC based p-SIM (physical SIM) or e-SIM (electronic SIM). The device supports a built-in inductive charging transmitter and receiver. The rechargeable battery is fully not user accessible.

#### 5.2. INTRODUCTION

This application for certification is leveraging the data reuse procedures from KDB 484596 D01 based on reference FCC ID: BCG-E4000A / IC: 579C-E4000A to cover variant model FCC ID: BCG-E4002A / IC: 579C-E4002A, FCC ID: BCG-E4033A / IC: 579C-E4033A, and FCC ID: BCG-E4034A / IC: 579C-E4034A. The major difference between the parent/reference model and the variant models is the depopulation in the variant model of the mmWave transmitter, and some LTE and 5G NR Bands. All other circuitry and features are identical. The data reuse test plan was approved via manufacturer KDB inquiry.

#### 5.3. MODEL DIFFERENCES

The manufacturer hereby declares the following for models A2483, A2636, A2638, A2639, and A2640.

A2483, A2636, A2638, A2639, and A2640 are highly similar, with the only differences being listed on the table below:

| Model  | FCC ID     | IC ID       | Model Changes          |
|--------|------------|-------------|------------------------|
| A2483  | BCG-E4000A | 579C-E4000A | Main Reference Model   |
| A2636  | BCG-E4002A | 579C-E4002A | FR2 removed            |
| A2638  | BCG-E4033A | 579C-E4033A | FR2 and B14/71 removed |
| A2639* | BCG-E4034A | 579C-E4034A | FR2 and B14/71 removed |
| A2640  | BCG-E4034A | 579C-E4034A | FR2 and B14/71 removed |

<sup>\*</sup>Note: Model only support (pSIM + pSIM) instead of (pSIM + eSIM). A2639 is electrically identical to A2640.

They have the same PCB layout, design, common components, antennas, antenna locations and housing cases.

More specifically, their cellular modem, Wi-Fi, BT, NFC, WPT and UWB transmitters are identical, and removal of cellular bands is done by software and depopulation of band-specific components associated with the removed bands.

Spot check verification has been done on models A2636, A2638, A2639, and A2640 in accordance with the test plan approved via KDB inquiry. Comparison of the models, upper deviation is within 3dB range and all tests are under FCC/ISED Technical Limits. The results documented for model A2483 may be applied as representative to models A2636, A2639, and A2640.

IC: 579C-E4002A, 579C-E4033A, 579C-E4034A

# 5.7. REFERENCE DETAIL

Reference application that contains the reused reference data.

| Equipment | Reference                  | Reference   | Report Title/Section               |
|-----------|----------------------------|-------------|------------------------------------|
| Class     | FCC ID / IC ID             | Application |                                    |
| PCE, TNE  | BCG-E4000A/<br>579C-E4000A | 13571601-E7 | FCC_IC 2G/3G Report / All Sections |

### 5.8. SOFTWARE AND FIRMWARE

The EUT firmware installed during testing was version 0.21.02-1.

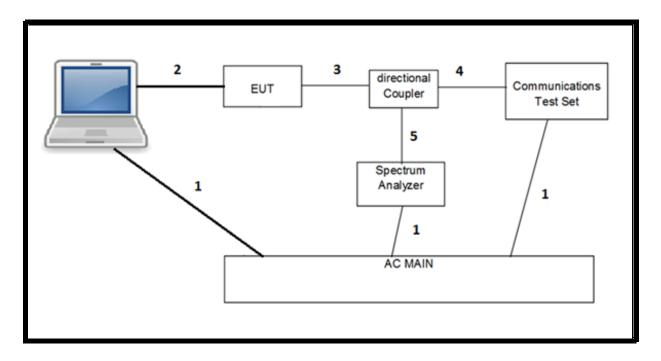

### 5.9. SPOT CHECK WORST-CASE CONFIGURATION AND MODE

The spot checks were performed on the worst case configurations based on the parent model of reference report.
