

Date: July 23, 2021

Federal Communications Commission Equipment Authorization Branch 7435 Oakland Mills Rd. Columbia MD 21046

Attn: Equipment Authorization Branch

Applicant: Apple Inc.

Product Description: Smartphone

To whom it may concern:

For LTE / 5GNR User equipment (UE) will not initiate transmissions and will only transmit after receiving the Node B (Base Station) device transmissions containing the Master Information Block (MIB) and System Information Block (SIB) necessary for it to join the network. Therefore, transmissions on non-allocated US bands cannot occur because there cannot be a Node B device operating on non-US bands in the USA / US Territories. Similar protocols are followed for 2G and 3G to ensure that the device will not transmit on bands it supports but are not covered by US allocation.

Sincerely,

Abhishek Rala Apple Inc.
