### 1. Attestation of Test Results

Applicant Name	APPLE INC.	
FCC ID	BCG-E8436A	
Model Name	A3101	
Applicable Standards	FCC 47 CFR § 2.1093	
Exposure Category	Radiofrequency (RF) Radiation Exposure (above 6GHz)	
	Uncontrol (mW/cm <sup>2</sup> over 4 cm <sup>2</sup> ) 30 min average	Occupational/controlled (mW/cm <sup>2</sup> over 4 cm <sup>2</sup> ) 6 min average
	1.0	5
Applicable limit	<input checked="" type="checkbox"/> Uncontrolled / <input type="checkbox"/> Occupational/controlled	
PD Result (mW/cm <sup>2</sup> over 4cm <sup>2</sup> )	0.698	
Simultaneous TX (ratio<1)	0.946	
Date Tested	6/29/2023 to 8/4/2023	
Test Results	Pass	
<p>UL Verification Services Inc. tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.</p> <p>This report contains data provided by the customer which can impact the validity of results. UL Verification Services Inc. is only responsible for the validity of results after the integration of the data provided by the customer.</p> <p>The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.</p> <p>This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST, or any agency of the U.S. Government, or any agency of the U.S. government.</p>		
Approved & Released By:	Prepared By:	
		
Dave Weaver Operations Leader UL Verification Services Inc.	Christopher Kuwatani Laboratory Engineer UL Verification Services Inc.	

## 2. Test Specification, Methods and Procedures

The tests documented in this report were performed in accordance with FCC 47 CFR § 2.1093, the following FCC Published RF exposure KDB procedures:

- 447498 D01 General RF Exposure Guidance v06
- 865664 D02 RF Exposure Reporting v01r02
- SPEAG cDASY6/8 System Handbook; part 4 cDASY6 Module mmWave
- SPEAG, DASY8 Application Note: SAR, APD & PD at 6 – 10 GHz (Version 5), April 2022
- IEC TR 63170: 2018

In addition to the above, [TCB workshop](#) information was used.

- [TCB workshop](#) November, 2017; RF Exposure Procedures (Power Density Evaluation)
- [TCB workshop](#) October, 2018; RF Exposure Procedures (Millimeter Wave Assessment)
- [TCB workshop](#) April, 2019; RF Exposure Procedures (Millimeter Wave RF Exposure Evaluation)
- [TCB workshop](#) November, 2019; RF Exposure Procedures (Millimeter Wave Scan Requirements)
- [TCB workshop](#) October 2020; RF Exposure Procedures (U NII 6-7 GHz RF Exposure)
- [TCB workshop](#) October 2022; RF Exposure Policies and Procedures (f-above-6 GHz Portable Devices)

## 3. Facilities and Accreditation

The test sites and measurement facilities used to collect data are located at

47266 Benicia Street

SAR Lab 3 and SAR Lab 6

UL Verification Services Inc. is accredited by A2LA, Certificate Number 0751.05

## 4. Measurement System & Test Equipment

### 4.1. EUmmWVx / E-Field 5G Probe

#### E-Field mm-Wave Probe for General Near-Field Measurements

	Two dipoles optimally arranged to obtain pseudo-vector information Minimum 3 measurements/point, 120° rotated around probe axis Sensors (0.8mm length) printed on glass substrate protected by high density foam Low perturbation of the measured field Requires positioner which can do accurate probe rotation
<b>Frequency Range</b>	750 MHz – 110 GHz (EUmmWV4)
<b>Dynamic Range</b>	< 20 V/m - 10'000 V/m with PRE-10 (min < 50 V/m - 3000 V/m)
<b>Position Precision</b>	< 0.2 mm (DASY8)
<b>Dimensions</b>	Overall length: 337 mm (tip: 20 mm) Tip diameter: encapsulation 8 mm (internal sensor < 1mm) Distance from probe tip to dipole centers: < 2 mm Sensor displacement to probe's calibration point: < 0.3 mm
<b>Applications</b>	E-field measurements of 5G devices and other mm-wave transmitters operating above 6GHz in < 2 mm distance from device (free-space) Power density, H-field and far-field analysis using total field reconstruction (DASY8 Module mmWave)
<b>Compatibility</b>	cDASY6/8 Module mmWave V3.2.2.2358

### 4.2. Data Acquisition Electronics(DAE)

	Serial optical link for communication with DASY embedded system (fully remote controlled) Two-step probe touch detector for mechanical surface detection and emergency robot stop
<b>Measurement Range</b>	-100 – +300 mV (16 bit resolution and two range settings: 4 mV, 400 mV)
<b>Input Offset Voltage</b>	<5 μV (with auto zero)
<b>Input Resistance</b>	200 Mohm
<b>Input Bias Current</b>	<50 fA
<b>Battery Power</b>	>10 hours of operation (with two 9.6 V NiMH batteries)
<b>Dimensions (L x W x H)</b>	60 x 60 x 68 mm

### 4.3. Measurement System

The DASY8 system used for performing compliance tests consists of the following items:

- A standard high precision 6-axis robot with controller, teach pendant and software. An arm extension for accommodating the data acquisition electronics (DAE).
- The EUmmWVx probe is based on the pseudo-vector probe design, which not only measures the field magnitude but also derives its polarization ellipse.
- A data acquisition electronics (DAE) which performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. The unit is battery powered with standard or rechargeable batteries. The signal is optically transmitted to the EOC.
- The Electro-optical converter (EOC) performs the conversion from optical to electrical signals for the digital communication to the DAE. To use optical surface detection, a special version of the EOC is required. The EOC signal is transmitted to the measurement server.
- The function of the measurement server is to perform the time critical tasks such as signal filtering, control of the robot operation and fast movement interrupts.
- The Light Beam used is for probe alignment. This improves the (absolute) accuracy of the probe positioning.
- A computer running Win10 and the DASY6/8<sup>1</sup> software.
- Remote control and teach pendant as well as additional circuitry for robot safety such as warning lamps, etc.
- The phantom which is specialized for 5G other accessories according to the targeted measurement.

<sup>1</sup> DASY8 software used: DASY6/8 mmWave V3.2.2.2358 and older generations.

## 4.4. Measurement Procedures

### 4.4.1. System Verification Scan Procedures

cDASY6/8 Module mmWave supports “5G Scan”, a fine resolution scan performed on two different planes which is used to reconstruct the E- and H-fields as well as the power density; the average power density is derived from this measurement.

#### Step 1: Power Reference Measurement

The Power Reference Measurement and Power Drift Measurements are for monitoring the power drift of the device under test in the batch process. The minimum distance of probe sensors to surface determines the closest measurement point to device under test.

#### Step 2: 5G Scan

The steps in the X, Y, and Z directions are specified in terms of fractions of the signal wavelength, lambda. Area Scan Parameters extracted from SPEAG cDASY6 System Handbook; part 4 cDASY6/8 Module mmWave.

#### Recommended settings for measurement of verification sources

Frequency [GHz]	Grid step	Grid extent X/Y [mm]	Measurement points
10	0.125 $\left(\frac{\lambda}{8}\right)$	60/60	18×18
30	0.25 $\left(\frac{\lambda}{4}\right)$	60/60	26×26
45	0.25 $\left(\frac{\lambda}{4}\right)$	42/42	28×28
60	0.25 $\left(\frac{\lambda}{4}\right)$	32.5/32.5	28×28
90	0.25 $\left(\frac{\lambda}{4}\right)$	30/30	38×38

The minimum distance of probe sensors to the verification source surface, horn antenna, is 10 mm for 10 GHz and 5.55mm for 30 GHz and above.

#### Step 3: Power drift measurement

The Power Drift Measurement measures the field at the same location as the most recent power reference measurement within the same procedure, and with the same settings. The Power Drift Measurement gives the field difference in dB from the reading conducted within the last Power Reference Measurement. This allows a user to monitor the power drift of the device under test within a batch process. The measurement procedure is the same as Step 1.

When the drift is larger than  $\pm 5\%$ , test is repeated from step1.

### 4.4.2. Scan Procedures

#### Step 1: Power Reference Measurement

Same as System Verification Scan Procedures step 1.

#### Step 2: 5G Scan

Same as System Verification Scan Procedures step 2. But measurement area is defined based on TCB work shop April 2019, “A sufficiently large measurement region and proper measurement spatial resolution are required to maintain field reconstruction accuracy”.

–Fields at the measurement region boundary should be ~20-30 dB below the peaks

#### Step 3: Power drift measurement

Same as System Verification Scan Procedures step 3.

When the drift is smaller than  $\pm 5\%$ , it is considered in the uncertainty budget if drifts larger than 5%, uncertainty is re-calculate.

## 4.5. Test Equipment

The measuring equipment used to perform the tests documented in this report has been calibrated in accordance with the manufacturers' recommendations and is traceable to recognized national standards.

### System Check

Name of Equipment	Manufacturer	Type/Model	Serial No.	Cal. Due Date

## 6. Device Under Test (DUT) Information

### 6.1. DUT Description

The Apple iPhone is a smartphone with cellular GSM, GPRS, EGPRS, UMTS, LTE, 5G, IEEE 802.11a/b/g/n/ac/ax, Bluetooth, Ultra-Wideband, GPS, NFC, NB UNII, 802.15.4, 802.15.4ab-NB and MSS technologies. All models except reference model support at least one UICC based SIM. The second SIM is either an UICC based p-SIM (physical SIM) or e-SIM (electronic SIM). The device supports a built-in inductive charging transmitter and receiver. The rechargeable battery is not user accessible.

All Models have the same PCB layout, circuit design, common components, antennas, and antenna locations their respective reference model. Their cellular modem, Wi-Fi, BT, NFC, WPT, UWB, NB UNII, 802.15.4, 802.15.4ab-NB, and MSS transmitters are identical.

BCM4388 has 2 vendors. The Wi-Fi/BT radio modules have the same mechanical outline (e.g., the same package dimension and pin-out layout), use the same on-board antenna matching circuit, have an identical antenna structure, and are built and tested to conform to the same specifications and to operate within the same tolerances. Baseline testing was performed on the three variants to determine the worst case on all conducted power and radiated emissions.

Device Dimension	Refer to Appendix A
Back Cover	The Back Cover is not removable
Battery Options	The rechargeable battery is not user accessible.
Accessory	Headset
Wireless Router (Hotspot)	<p>Wi-Fi Hotspot mode permits the device to share its cellular data connection with other Wi-Fi-enabled devices.</p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Mobile Hotspot (Wi-Fi 2.4 GHz)</li> <li><input checked="" type="checkbox"/> Mobile Hotspot Wi-Fi 5.2(UNII-1)/5.8 GHz(UNII-3)</li> </ul>
AirPlay	<p>AirPlay mode enabled devices transfer data directly between each other</p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> AirPlay (Wi-Fi 2.4 GHz)</li> <li><input checked="" type="checkbox"/> AirPlay (Wi-Fi 5 GHz)</li> </ul>
Bluetooth Tethering (Hotspot)	<p>BT Tethering mode permits the device to share its cellular data connection with other devices.</p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> BT Tethering (Bluetooth 2.4 GHz)</li> </ul>

## 6.2. Wireless Technologies

Wireless technologies	Frequency bands	Operating mode	Duty Cycle used for PD testing
Wi-Fi	6E <sup>1</sup>	802.11a 802.11ax (HE20) 802.11ax (HE40) 802.11ax (HE80) 802.11ax (HE160)	98.82% (802.11ax 80MHz BW) 97.80% (802.11ax 160MHz BW)

**Notes:**

- Duty cycle for Wi-Fi is referenced from the U-NII report. (14523744-E10V1 & E11V1)

## 7. RF Exposure Conditions (Test Configurations)

Refer to Appendix A for the specific details of the antenna-to-antenna and antenna-to-edge(s) distances.

Antenna	Band	Back	Front	Edge Top	Edge Right	Edge Bottom	Edge Left
ANT5	Wi-Fi 6E	Yes	Yes	No	No	Yes	Yes
ANT6	Wi-Fi 6E	Yes	Yes	Yes	No	No	Yes

### 7.1. Test Rationale

An investigation was performed to determine the worst-case position per antenna. After completing the investigation, it was determined that Back yielded the highest field strength for both antennas; thus, Back was the only position tested. Refer to §10.1 for worst case positions results per antenna.

## 8. System Performance Check

Per Nov 2017,TCB Workshop

System validation is required before a system is deployed for measurement.

System check is also required before each series of continuous measurement and, as applicable, repeated at least weekly.

Peak and spatially averaged power density at the peak location(s) must be compared to calibrated results according to the defined test conditions

- the same spatial resolution and measurement region used in the waveguide calibration should be applied to system validation and system check.
- 1 cm<sup>2</sup> and 4 cm<sup>2</sup> spatial averaging have been recommended in the AHG10 draft TR with reference targets available for specific waveguide.
- power density distribution should also be verified, both spatially (shape) and numerically (level) through visual inspection for noticeable differences.
- the measured results should be within 10% of the calibrated targets.

The system components, software settings and other system parameters shall be the same as those used for the compliance tests. The system check shall be performed at closest probe calibration frequency point as in the compliance tests, e.g., if the EUT operates at 35 GHz, it is recommended to perform the validation at 30 GHz.

SAR Lab	Date	Frequency (GHz)	5G Verification Source SN	Source Cal. ### Note(s):

Input power that was used, 19.3 dBm, is same as calibration data.

## 9. Conducted Output Power Measurements

### 9.1. Wi-Fi 6E (U-NII 5-8 Bands)

When the same transmission mode configurations have the same maximum output power on the same channel for the 802.11 a/ax modes, the channel in the lower order/sequence 802.11 transmission mode is selected.

The maximum output power specified for production units are determined for all applicable 802.11 transmission modes in each standalone and aggregated frequency band. Maximum output power is measured for the highest maximum output power configuration(s) in each frequency band according to the default power measurement procedures.

**Wi-Fi 6E Test channels were determined in one of two ways:**

- Wi-Fi 6E was Aggregated due to the same transmission mode being selected for iPD testing. 5 total test channels from across all U-NII 5/6/7/8 were selected.
- Wi-Fi 6E was Split due to different transmission modes being selected for iPD testing. A minimum of 3 test channels were selected for each individual U-NII Band.

#### **Maximum Output Power for Wi-Fi 6E**

The table below is the maximum output power for this device. The highlighted values indicates what the overall worst case transmission mode will be required for SAR testing per channel. In the Wi-Fi 6E (Power State) table, the highlighted worst case Low/Mid/High channels are selected for Mode A and Mode B.

Standard Power (Indoor/Outdoor)

Table with columns: Bandwidth, Band, Channel, Frequency (MHz), and Maximum Output Power (dBm). It is divided into sections for 20 MHz, 40 MHz, 80 MHz, and 160 MHz, each with sub-sections for UNII-0, UNII-1, UNII-2, and UNII-3. The table contains a grid of data points for various antenna configurations and power levels.

Low Power (Indoor)

Table with columns: Bandwidth, Band, Channel, Frequency (MHz), and Maximum Output Power (dBm). It is divided into sections for 20 MHz, 40 MHz, 80 MHz, and 160 MHz, each with sub-sections for UNII-0, UNII-1, UNII-2, and UNII-3. The table contains a grid of data points for various antenna configurations and power levels.

**Wi-Fi 6E (Power States)**

For Wi-Fi 6E bands, there are use 6 difference power states:

- Power state 1: 802.15.4ab-NB<sub>OFF</sub> | P<sub>mid</sub> | CELL<sub>OFF</sub>
- Power state 2: 802.15.4ab-NB<sub>ON</sub> | P<sub>mid</sub> | CELL<sub>OFF</sub>
- Power state 3: 802.15.4ab-NB<sub>OFF</sub> | P<sub>high</sub> | CELL<sub>OFF</sub>
- Power state 4: 802.15.4ab-NB<sub>OFF</sub> | P<sub>low</sub> | CELL<sub>ON</sub>
- Power state 5: 802.15.4ab-NB<sub>ON</sub> | P<sub>high</sub> | CELL<sub>OFF</sub>
- Power state 6: 802.15.4ab-NB<sub>ON</sub> | P<sub>low</sub> | CELL<sub>ON</sub>

## 10. Measured and Reported (Scaled) Results

Per TCB workshop October 2018, 4 cm<sup>2</sup> averaging area is considered.

- psPD value (mW/cm<sup>2</sup>) used the psPD<sub>tot+</sub> avg value (W/m<sup>2</sup>) of test result plot.

### Wi-Fi 6E Test Rationale:

- iPD testing was performed on 5 selected channels spread across all the 6E spectrum. Channels were determined based on the highest maximum output power and transmission mode combination per applicable U-NII band.
  - No channels that could transmit below 6GHz were selected for testing so as to use the ESR Test Methodology only.
- The test position for iPD was determined using the worst-case V/m (field strength) on each required test position needed for consideration.
- As IPD evaluations used source reconstruction (SR) methods from Cuija et al<sup>1</sup> additional SAR testing detailed in KDB 388624 D02 - OVER6G was not required.

<sup>1</sup>K. S. Cuija, et al., "Experimental Exposure Evaluation From the Very Close Near-to the Far-Field Using a Multiple-Multipole Source Reconstruction Algorithm," *IEEE Trans. Ant. Propag.*, vol. 70, no. 9, pp. 8461-8472, Sep. 2022, doi: 10.1109/TAP.2022.3177564.

### 10.1. Wi-Fi 6E Worst Position Results

ANT	RF Exposure Conditions	Mode	Power Mode	U-NII Band	Dist. (mm)	Test Position	Ch No.	Freq. (MHz)	eMax (V/m)
ANT 5	Body & Hotspot	802.11ax (160 MHz)	Power State 1	U-NII 5	2	Rear	47	6195.0	<b>40.4</b>
						Front			18.7
						Edge Right			10.4
						Edge Bottom			9.2
						Edge Left			16.8
ANT 6	Body & Hotspot	802.11ax (160 MHz)	Power State 1	U-NII 5	2	Rear	47	6195.0	<b>126.0</b>
						Front			45.1
						Edge Top			20.0
						Edge Right			35.0
						Edge Left			55.1

#### Note(s):

- Additional worst position testing is not needed for U-NII 6/7/8, as they share the same antennas across bands (i.e., ANT 5 supports U-NII 5/6/7/8 and ANT 6 supports U-NII 5/6/7/8).

### 10.2. Wi-Fi 6E Test Results

# 11. Simultaneous Transmission Conditions

Total exposure ratio calculated by taking ratio of reported iPD or SAR divided by iPD or SAR limit and adding it to measured power density or SAR divided by power density limit or SAR limit. Numerical sum of the two ratios should be less than 1

$$TER = \sum_{a=1}^A \frac{SAR_a}{SAR_{a, limit}} + \sum_{b=1}^B \frac{psPD_b}{psPD_{b, limit}} < 1$$

The simultaneous transmission possibilities for this device are listed as below:

RF Exposure Condition	Capable Transmit Configurations						Item				
Head Body Worn Accessory Hotspot	WWAN & 5G OFF (CELLULAR ANTENNAS OFF)	+	Wi-Fi 2.4 GHz		+	NB UNII (P <sub>High</sub> )	1				
		+	Wi-Fi 2.4 GHz		+	NB UNII (P <sub>Mid</sub> )	2				
		+	Wi-Fi 2.4 GHz				+	802.15.4 ab NB	3

**Note(s):**

- Wi-Fi 2.4GHz & Bluetooth cannot transmit simultaneously.
- Wi-Fi 2.4GHz & Wi-Fi 5GHz cannot transmit simultaneously.
- NB UNII can only transmit simultaneously with Wi-Fi 2.4GHz.
- 802.15.4ab-NB cannot transmit simultaneously with NB UNII.
- 802.15.4ab-NB cannot transmit simultaneously on ANT 5 and ANT 6.
- Only Wi-Fi 2.4GHz, Wi-Fi 5GHz, Wi-Fi 6E support MIMO transmission.
- Wi-Fi 2.4/5/6E Power State 1: 802.15.4ab-NB OFF | P<sub>Mid</sub> | CELL OFF
- Wi-Fi 2.4/5/6E Power State 2: 802.15.4ab-NB ON | P<sub>Mid</sub> | CELL OFF
- Wi-Fi 2.4/5/6E Power State 3: 802.15.4ab-NB OFF | P<sub>High</sub> | CELL OFF
- Wi-Fi 2.4/5/6E Power State 4: 802.15.4ab-NB OFF | P<sub>Low</sub> | CELL ON
- Wi-Fi 2.4/5/6E Power State 5: 802.15.4ab-NB ON | P<sub>High</sub> | CELL OFF
- Wi-Fi 2.4/5/6E Power State 6: 802.15.4ab-NB ON | P<sub>Low</sub> | CELL ON
- Bluetooth/NB UNII/802.15.4: P<sub>Low</sub> is used when both Wi-Fi and WWAN antennas are active.
- Bluetooth/NB UNII/802.15.4: P<sub>Mid</sub> is used when Wi-Fi antenna is active and WWAN antenna is inactive. P<sub>Mid</sub> power state occurs during Wi-Fi states 1/2.
- Bluetooth/NB UNII/802.15.4: P<sub>High</sub> is used when Wi-Fi antenna is active and WWAN antenna is inactive or with Wi-Fi inactive and WWAN antenna is active. P<sub>High</sub> power state occurs during Wi-Fi states 3/5.
- Bluetooth/NB UNII/802.15.4: P<sub>standalone</sub> is used when Wi-Fi and WWAN antennas are inactive.
- Wi-Fi SISO mode SAR result can also represent for MIMO mode SAR and is used for MIMO mode simultaneous transmission analysis because antennas are not overlapping, and the MIMO mode maximum power is equal or less than SISO mode.
- 5G NR only supported NSA mode.

For EN-DC mode, Qualcomm Smart Transmit algorithm in WWAN adds directly the time-averaged RF exposure from 4G(LTE) and time-averaged RF exposure from 5G NR. Smart Transmit algorithm controls the total RF exposure from both 4G and 5G NR to not exceed FCC limit. Therefore, simultaneous transmission compliance between 4G+5G NR operation is demonstrated in the Part 2 Report during algorithm validation. In Part 1 Report, simultaneous transmission compliance was evaluated individually with other Radios (WLAN or BT) using one of 4G or 5G NR.

### 11.1. Simultaneous Transmission Result

#### 11.1.1. CELL OFF State 1 & 2 & 3 (Wi-Fi + BT/802.15.4)

ANT 5	Standalone SAR (W/kg) or PD (mW/cm <sup>2</sup> )		ΣRatio Wi-Fi 6E Pstate 1 ANT 5 + BT (P <sub>high</sub> )	ANT 6	Standalone SAR (W/kg) or PD (mW/cm <sup>2</sup> )		ΣRatio Wi-Fi 6E Pstate 1 ANT 6 + BT (P <sub>high</sub> )
	Wi-Fi 6E Pstate 1 ANT 5	BT (P <sub>high</sub> )			Wi-Fi 6E Pstate 1 ANT 6	BT (P <sub>high</sub> )	
	mW/cm <sup>2</sup>	W/kg	mW/cm <sup>2</sup>		W/kg		
Combinations	1	2	1+2	Combinations	1	2	1+2
Applicable Limit	1	1.6	1	Applicable Limit	1	1.6	1
Reported Measurements	0.668	0.397	-	Reported Measurements	0.698	0.397	-
Ratio to Limit	0.668	0.248	<b>0.917</b>	Ratio to Limit	0.698	0.248	<b>0.946</b>

**Note(s):**

1. Reported SAR measurements are referenced from the FCC SAR report (14523744-S1V1).

#### 11.1.2. CELL ON State 4 (CELL + 6E + BT/802.15.4)

ANT 5	Standalone SAR (W/kg) or PD (mW/cm <sup>2</sup> )			ΣRatio Wi-Fi 6E Pstate 4 ANT 5 + BT (P <sub>low</sub> ) + WWAN Cell-on	ANT 6	Standalone SAR (W/kg) or PD (mW/cm <sup>2</sup> )			ΣRatio Wi-Fi 6E Pstate 4 ANT 6 + BT (P <sub>low</sub> ) + WWAN Cell-on
