Attention: Mr. Rashmi Doshi

Subject: Cover Letter on Simultaneous SAR Evaluation

Dear Mr. Doshi;

The Apple iPhone, Model A1241 does not require simultaneous SAR testing because the Cellular and WiFi/Bluetooth antennas have a separation distance of 8cm (3.15 inches).

The SAR-Antenna pair ratio: $2.16 / 8 = 0.270 < 0.3$

Conclusion

- Based upon KDB 648474 simultaneous SAR evaluation requirements, since the SAR-to Antenna pair ratio is less than 0.3, simultaneously SAR evaluation is not required.
- Based upon KDB 628591 TCB exclusion list, smart phone with embedded 802.11 b/g radio and Bluetooth radios are not subject to TCB exclusion list.

Sincerely,

A handwritten signature in black ink, appearing to read 'Robert Steinfeld', is written over the 'Sincerely,' text.
