Subject: Statement of Attestation – Dual Client

Ref: FCC numbers

Model(s)	FCC ID
A2786	BCGA2786

To whom it may concern:

Apple Inc., attest that these devices comply with the device protocol requirements and operational restrictions for indoor client 6CD.

- a. This device does not support the indoor subordinate (6PP) category and the maximum power does not exceed the authorised value.
- b. This device will only associate and connect with a low-power indoor access point, subordinate device or standard access point and never directly link to any other client devices.
- c. This device will always initiate transmission under the control of a low-power indoor access point, subordinate device, or standard-power access point except for brief communications before joining a network. These brief messages will only occur if the client has detected an indoor access point or subordinate device, or standard access point operating on a channel. These brief messages will have a time-out mechanism such that if it does not receive a response from an access point it will not continually repeat the request.
- d. This device, when associated and connected with a low-power indoor access point, subordinate device, or standard access point, will operate at a power lower as advertised by the indoor access point, subordinate device or standard access point:
 - i. lower than or equal to the power advertised by the low-power indoor access point and never above the maximum output power allowed by the FCC grant for clients associated with indoor access points.
 - ii. lower than or 6 dB below the power advertised by the standard access point.
- e. Furthermore, we fully understand this device is prohibited from the control of or communicating with unmanned aircraft systems, including drones.

For any questions, please feel free to contact me.

Sincerely,

One Apple Park Way
