RE: FCC ID: BCR-RPT-NCM1937_ATCB005168
Attention: Tom Tidwell

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that the MPE report states the test frequency is 928MHz. Please note that this is not a prt 24 frequency and is not representative of the device for which certification is being sought. Please provide an MPE report with a separation calculation for the 1900MHz band.
2. Please note that while the manual appears to address other safety distances, it does not appear to address the rf exposure distance from the MPE report. Please provide a manual that gives clear indications of the rf safety distance and the maximum gain antenna used for that distance. This should be a max gain antenna of 17dBi and a safe distance of at least 1.5 or 2 meters.
3. Please note that the operational description has not been requested to be confidential, but is titled confidential. If the operational description is desired to be confidential, please include it on a revised confidentiality request.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
