

The image shows the interior of a chassis door, which is a metal plate with various electronic components mounted on it. The components are secured with screws. At the top, there is a copper-colored heat spreader with a grid of small holes. Below it is a large, rectangular, silver-colored metal plate. To the right of this plate, there are several blue and green cables connected to a small, rectangular component. At the bottom, there is another rectangular metal plate, also silver-colored, with a label on its left side. The entire assembly is mounted on a white metal frame.
