1. Thank you for your email. Regarding your response to question 3, please revise the System Validation Data Table on p.20/96 of the SAR report with the new PCS validation measurement value.

→ Please find the attachment.

2. Question 5 was not answered. Was 2-slot mode investigated? It appears to have a higher average output power than 4-slot mode. Please respond.

→ We investigated SAT for all Tx modes(1~4 Tx) and updated the test results from page 77 to 96.

Additionally, you can check the validation data on that page. Please find the attachment.

The item indicated above must be submitted before processing can continue on the above referenced application.

Sincerely,

Gregory Czumak
