Note: 1. The configuration can be identified as label.
 2. To add new models 17Z90S and 17ZD90S.
 3. To add new Configuration (HVIN) 17Z90S-G, 17Z90S-V, 17Z90S-M, 17Z90S-C and 17Z90S-H.
 4. Based on original ROYAL MAIN B/D main board, the difference between ROYAL MAIN B/D main board and MTL MAIN B/D main board is refer to next table. The MTL MAIN B/D main board is for new Configuration (HVIN) 17Z90S-G, 17Z90S-V, 17Z90S-M, 17Z90S-C and 17Z90S-H.
 5. To add new CPUs for MTL MAIN B/D main board.
 6. To add new Battery Pack for MTL MAIN B/D main board.
 7. To add new Type C cable (3A).

The WLAN SUB board and antenna location are identical with previous certificated.

Permissive Change
MTL MAIN B/D

This time, there are three different configurations for the models, namely Sku1, Sku2, and Sku3. They have different corresponding certificate dates; Sku1 and Sku2 are dated on 2022-12-14, while Sku3 is dated on 08/10/2023.

Based on these differences, we will conduct testing according to the worst-case scenarios for RSE/band-edge as originally reported. For detailed modes, please refer to the respective reports in Section 3.8.

For SAR testing, we will conduct testing on SAR modes for laptops with SAR values greater than 0.8 W/kg, as specified in the original SAR report in KDB 178919 D01v06 section VI.

Furthermore, this permissive change does not involve any adjustments to the power settings. The RF power levels will remain consistent with the previous configuration. (In other words, all RF power is consistent with the original certificate grant on 2022-12-14)

Best regards
