To whom it may concern:  
1-28-2005

The reasons that TFT Model 460 is not covered by 47CFR 2.1091(b), 47CFR 2.1091(c), 47CFR 2.1093(b) follows:

The equipment under test (EUT) is designed to be rack mounted in a fixed location. It is not easily moved from location to another because antenna, power, control and monitoring cables must be removed before re-location. The EUT cannot be operated while in transit from one fixed location to another. The EUT is physically used in a rack mount enclosure. The EUT is normally connected to a transmission line which conducts RF energy from the unit to an antenna, generally located many meters above the body of any possible user or nearby persons. Therefore the EUT is not qualified for the 47CFR2.1091(b).

The EUT is not a mobile device as defined by 47CFR2.1091(b).

The EUT is designed to be used so that the radiating structure (antenna) is located several meters above the equipment on a support structure. Therefore the EUT is not qualified for the 47CFR2.1093(b)

The main consideration is that the EUT is not a mobile or portable device, such as a wireless telephone or portable computer with an RF transmitter. The EUT is generally deployed in a commercial, professional and secured environment and restricted from the vicinity of the general public or passers-by.
