Hi Mike,

Here are our responses to the issues.

Question #1: At the end of antenna specification sheet, it provides the guideline for Bluetooth co-location condition. Please explain why Bluetooth transmitter is included in the antenna specification.

Our Response #1: The antenna spec is revised (as attached).

Question #2: In the SAR test report, the duty cycle is 100% but the crest factor of 4 is used for 802.11b modulation and crest factor of 20 is used for 802.11g modulation. Please provide justification and supporting data to demonstrate why crest factor other than 1 was used.

Our Response #2: SAR is re-evaluated. Please refer to the attached report.

Hope the above would conclude this case and receive your grant soon. We are a little bit behind the schedule as promised to our customer. Thank you in advance for your assistance.

Best Rgds,
WK

Mike Kuo <MKUO@CCSEMC.com>
