Issued date : September 27, 2019 FCC ID : BKEHDH002

RADIO TEST REPORT

Test Report No.: 12656071S-X-R1

Applicant : Nintendo Co., Ltd.

Type of Equipment : Game console

Model No. : HDH-002

FCC ID : BKEHDH002

Test regulation : FCC Part 15 Subpart E: 2019

Section 15.407(DFS test only)

Test Result : Complied (Refer to SECTION 4.2)

- 1. This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- 2. The results in this report apply only to the sample tested.
- 3. This sample tested is in compliance with the limits of the above regulation.
- 4. The test results in this test report are traceable to the national or international standards.
- 5. This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- 6. This test report covers Radio technical requirements.
 - It does not cover administrative issues such as Manual or non-Radio test related Requirements. (if applicable)
- 7. The all test items in this test report are conducted by UL Japan, Inc. Shonan EMC Lab.
- 8. The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan has been accredited.
- 9. The information provided from the customer for this report is identified in SECTION 1.
- 10. This report is a revised version of 12656071S-X.. 12656071S-X is replaced with this report.

SECTION 1: Customer information

Company Name Nintendo Co., Ltd.

Address 11-1 Hokotate-cho, Kamitoba, Minami-ku, Kyoto 601-8501, Japan :

Telephone Number +81 75 662 9600 Facsimile Number +81 75 662 9624 Contact Person Kazuya Kuramoto

The information provided from the customer is as follows;

- Applicant, Type of Equipment, Model No., FCC ID on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer information
- SECTION 2: Equipment under test (E.U.T.)
- SECTION 4: Operation of E.U.T. during testing
- * The laboratory is exempted from liability of any test results affected from the above information in SECTION 2 and 4.

SECTION 2: Equipment under test (E.U.T.)

2.1 Identification of E.U.T.

Type of Equipment Game Console Model No. HDH-002

Serial No. Refer to SECTION 4.2 Rating DC 3.8 V (battery),

AC Adapter input: AC 100 V - 240 V, 50 Hz / 60 Hz, 1 A,

AC Adapter output: DC 5 V - DC 15 V, 2.6 A

August 2, 2019 Receipt Date of Sample

(Information from test lab.)

Country of Mass-production China

Condition of EUT Engineering prototype

(Not for Sale: This sample is equivalent to mass-produced items.)

Modification of EUT No Modification by the test lab.

2.2 **Product description**

Model: HDH-002 (referred to as the EUT in this report) is a Game Console. The EUT is intended to be used for software development or events.

Radio Specification

Wireless LAN, Bluetooth part:

Equipment type Transmitter

Frequency of operation Wireless LAN part: (2.4 GHz): 2412 MHz - 2472 MHz,

> (U-NII-1): 5180 MHz - 5240 MHz, (U-NII-2A): 5260 MHz - 5320 MHz,

Bluetooth (BDR/EDR/BTLE) part: 2402 MHz - 2480 MHz

37.4 MHz Radio part clock frequency

Wireless LAN part: (2.4 GHz): 5 MHz, (5 GHz): 20 MHz, Channel spacing

Bluetooth part: (BDR/EDR): 1 MHz, (BT LE): 2 MHz

Type of modulation Wireless LAN part:

2.4 GHz bands: DBPSK, DQPSK, CCK, OFDM,

5 GHz bands: OFDM Bluetooth (BT) part:

BDR (Basic Data Rate): GFSK,

EDR (Enhanced Data Rate): $\pi/4$ -DQPSK, 8DPSK,

BT LE (Low Energy mode): GFSK

Sheet metal antenna Antenna type

Antenna connector type (Ant: 0): MHF2, (Ant: 1): MHF2

Antenna gain 2.4 GHz bands: (Ant: 0): -0.904 dBi, (Ant: 1): -0.730 dBi

5 GHz bands: (Ant: 0): 2.949 dBi, (Ant: 1): 1.994 dBi

DC 1.8 V, DC 3.3 V Power Supply (radio part input) Operation temperature range +5 deg.C to +35 deg.C

Remarks: This wireless module consists of 1 chip each of 5 GHz bands and 2.4 GHz bands.

NFC part:

Equipment type Transmitter Frequency of operation 13.56 MHz Radio part clock frequency 27.12 MHz Type of modulation **ASK**

Power Supply (radio part input) DC 1.8 V, DC 5.0 V Antenna type Ferrite Chip Antenna Operation temperature range +5 deg.C to +35 deg.C

Page : 6 of 22

Issued date : September 27, 2019 FCC ID : BKEHDH002

SECTION 3: Scope of Report

The EUT has the channels from 5180 MHz to 5320 MHz.

This report only covers DFS requirement subject to 5250 MHz to 5350 MHz bands, as specified by the following referenced procedures.

SECTION 4: Test specification, procedures & results

4.1 Test Specification

Test Specification : FCC Part 15 Subpart E

FCC Part 15 final revised on June 4, 2019 and effective July 5, 2019 except 15.258

Title : FCC 47CFR Part15 Radio Frequency Device Subpart E

Unlicensed National Information Infrastructure Devices

Section 15.407 General technical requirements

Test Specification : KDB 905462 D02 v02

Title : COMPLIANCE MEASUREMENT PROCEDURES FOR UNILICENSED

-NATIONAL INFORMATION INFRASTRUCTURE DEVICES

OPERATING IN THE 5250 - 5350 MHz AND 5470 - 5725 MHz BANDS

INCORPORATING DYNAMIC FREQUENCY SELECTION

1-22-3 Megumigaoka, Hiratsuka-shi, Kanagawa-ken, 259-1220 JAPAN

| Time | | RSS-247 6.3 | | |
| In-Service Monitoring | Yes | FCC15.407 (h)(2) | N/A | Complied |
| for Channel Move Time, Channel Closing Transmission | | FCC, KDB 905462 D02 Section 7.8.3 | | a) |
| Time | | RSS-247 6.3 | | |
| In-Service Monitoring | Yes * | FCC15.407 (h)(2) | N/A | Complied |
| for Non-Occupancy period | | FCC, KDB 905462 D02 Section 7.8.3 | | b) |
| | | RSS-247 6.3 | - | |
| Statistical Performance Check | Not required | FCC15.407 (h)(2) FCC, KDB 905462 D02 Section 7.8.4 | N/A | N/A |

^{*}Although this test was not required in FCC, KDB 905462 D02, it was performed as additional test.

a) Refer to SECTION 6 (data of In-Service Monitoring for Channel Move Time, Channel Closing Transmission Time)

b) Refer to SECTION 7 (data of In-Service Monitoring for Non-Occupancy Period)

Symbols:

Complied The data of this test item has enough margin, more than the measurement uncertainty.

Complied# The data of this test item meets the limits unless the measurement uncertainty is taken into consideration.

1-22-3 Megumigaoka, Hiratsuka-shi, Kanagawa-ken, 259-1220 JAPAN

Page : 8 of 22

Issued date : September 27, 2019 FCC ID : BKEHDH002

Table 3: DFS Detection Thresholds for Master Devices and Client Devices With Radar

| Maximum Transmit Power | Value (See Notes 1, 2 and 3) |
|---|------------------------------|
| E.I.R.P. ≥ 200 milliwatt | -64 dBm |
| E.I.R.P. < 200 milliwatt and | -62 dBm |
| power spectral density < 10dBm/MHz | |
| E.I.R.P. < 200 milliwatt that do not meet the power | -64 dBm |
| spectral density requirement | |

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

Note 3: E.I.R.P. is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.

Table 4: DFS Response Requirement Values

| Parameter | Value |
|-----------------------------------|---|
| Non-occupancy period | Minimum 30 minutes |
| Channel Availability Check Time | 60 seconds |
| Channel Move Time | 10 seconds |
| | See Note 1 |
| Channel Closing Transmission Time | 200 milliseconds + an aggregate of 60 |
| | milliseconds over remaining 10 second period. |
| | See Notes 1 and 2 |
| U-NII Detection Bandwidth | Minimum 100 % of the U-NII 99 % transmission |
| | power bandwidth |
| | See Note 3 |

Note 1: The Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.

Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signal will not count quiet periods in between transmissions.

Note 3: During the U-NII Detection Bandwidth detection test, radar type 0 should be used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

SECTION 5: Operation of E.U.T. during testing

5.1 Operating Modes

The EUT, which is a Client Device without Radar detection capability, operates over the 5260 MHz - 5320 MHz.

The EUT uses one transmitter connected to a 50 ohm coaxial antenna ports. The antenna port is connected to the test system.

WLAN traffic is generated by streaming the ping data with iperf.exe (ver.1.7.0) from the Master to the Client. (Channel loading was over 17 %)

The EUT utilizes the 802.11a, 802.11n and 802.11ac architecture, with a nominal channel bandwidth. The EUT had used IEEE 802.11ac VHT80 (widest mode).

The FCC ID for the Master Device used with EUT for DFS testing is LDK102073.

The rated output power of the Master unit is > 200 mW (23 dBm). Therefore the required interference threshold level is -64 dBm. After correction for antenna gain and procedural adjustments, the required conducted threshold at the antenna port is -64 + 1 + 4= -59 dBm (threshold level + additional 1 dB + antenna gain *1)).

*1) Minimum antenna gain of Master Device (FCC ID: LDK102087, IC No.: 2461B-102087)

5.3 Test and Measurement System

SYSTEM OVERVIEW

The measurement system is based on a conducted test method.

The software selects waveform parameters from within the bounds of the signal type on a random basis using uniform distribution. The short pulse types 2, 3, and 4, the long pulse type 5, and the frequency hopping type 6 parameters are randomized at run-time.

The signal monitoring equipment consists of a spectrum analyzer with the capacity to display 8001 bins on the horizontal axis. A time-domain resolution of 2 ms/bin is achievable with a 16 seconds sweep time, meeting the 10 seconds short pulse reporting criteria. The aggregate ON time is calculated by multiplying the number of bins above a threshold during a particular observation period by the dwell time per bin, with the analyzer set to peak detection. A time-domain resolution of 3 ms/bin is achievable with a 24 seconds sweep time, meeting the 22 seconds long pulse reporting criteria and allowing a minimum of 10 seconds after the end of the long pulse waveform.

FREQUENCY HOPPING RADAR WAVEFORM GENERATING SUBSYSTEM

The first 100 frequencies are selected out of the hopping sequence of the randomized 475 hop frequencies. Only a *Burst* that has the frequency falling within the receiver bandwidth of the tested U-NII device is selected among those frequencies. (Frequency-domain simulation). The radar waveform generated at the start time of the selected *Burst* (Time-domain simulation) is download to the Signal Generator.

If all of the randomly selected 100 frequencies do not fall within the receiver bandwidth of the U-NII device, the radar waveform is not used for the test.

CONDUCTED METHODS SYSTEM BLOCK DIAGRM

MEASUREMENT SYSTEM FREQUENCY REFERENCE

Lock the signal generator and the spectrum analyzer to the same reference sources as follows: Connect the 10 MHz OUT on the signal generator to the 10 MHz IN on the spectrum analyzer and set the spectrum analyzer 10 MHz In to On.

UL Japan, Inc. Shonan EMC Lab.

1-22-3 Megumigaoka, Hiratsuka-shi, Kanagawa-ken, 259-1220 JAPAN

Test report No. : 12656071S-X-R1 Page : 15 of 22

Issued date : September 27, 2019 FCC ID : BKEHDH002

SYSTEM CALIBRATION

Step 1: Set the system as shown in Figure 4 of KDB 905462 D02 7.2.3.

Step 2: Adjust each attenuator to fulfill the following three conditions:

- WLAN can be communicated, and
- Rader detection threshold level is bigger than Client Device traffic level on the spectrum analyzer, and
- Master Device traffic level is not displayed on the spectrum analyzer.

Step 3: Terminate 50 ohm at B, C, D and E points, and connect the spectrum analyzer to the point A. (See the figure on Section 5.3)

At the point A, adjust the signal generator and spectrum analyzer to the center frequency of the channel to be measured. Download the applicable radar waveforms to the signal generator. Select the radar waveform, trigger a burst manually and measure the amplitude on the spectrum analyzer. Readjust the amplitude of the signal generator as required so that the peak level of the waveform is at a displayed level equal to the required or desired interference detection threshold. Separate signal generator amplitude settings are determined as required for each radar type.

Step 4: Without changing any of the instrument settings, restore the system setting to Step 2 and adjust the Reference Level Offset of the spectrum analyzer to the level at Step 3.

By taking the above steps 1 to 4, the spectrum analyzer displays the level of the signal generator as received at the antenna ports of the Master Device.

See Clause 5.4 for Plots of Noise, Rader Waveforms, and WLAN signals.

5.4 Plots of Noise, Rader Waveforms, and WLAN signals

It was confirmed that the EUT did not transmit before having received appropriate control signals from a Master Device.

<u>SECTION 6: In-Service Monitoring for Channel Move Time, Channel Closing Transmission Time</u>

6.1 Operating environment

Test place : No.3 Shielded room

Temperature : 25 deg.C Humidity : 48 %RH

6.2 Test Procedure

Transfer files from the Master Device to the Client Device on the tested channel during the entire period of the test. The Radar Waveform generator sends a Burst of pulses for one of the Short Pulse Radar Types 0 at levels defined, on the Operating Channel. An additional 1 dB is added to the radar test signal to ensure it is at or above the DFS Detection Threshold, accounting for equipment variations/errors.

Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds.

6.3 Test data

| Test Item | Unit Measurement Time | | Limit | Results | |
|-----------------------|-----------------------|-------|--------|---------|--|
| Channel Move Time *1) | [s] | 0.060 | 10.000 | Pass | |
| Channel Closing | | | | | |
| Transmission Time *2) | [ms] | 0 | 60 | Pass | |

*1) Channel Move Time is calculated as follows: (Channel Move Time) = (End of Transmission) - (End of Burst)

*2) Channel Closing Transmission Time is calculated from (End of Burst + 200 ms) to (End of Burst + 10 s) (Channel Closing Transmission Time) = (Number of analyzer bins showing transmission) x (dwell time per bin) = 0 x 2 [ms]

SECTION 7: In-Service Monitoring for Non-Occupancy Period

7.1 Operating environment

Test place : No.3 Shielded room

Temperature : 25 deg.C Humidity : 48 %RH

7.2 Test Procedure

The following two tests are performed:

1). Transfer files from the Master Device to the Client Device on the tested channel during the entire period of the test. The Radar Waveform generator sends a Burst of pulses for one of the Radar Types 0 at levels defined on the Operating Channel. An additional 1 dB is added to the radar test signal to ensure it is at or above the DFS Detection Threshold, accounting for equipment variations/errors.

Observe the transmissions of the EUT after the Channel Move Time on the Operating Channel for duration greater than 30 minutes.

2). Transfer files from the Master Device to the Client Device on the tested channel during the entire period of the test. Observe the transmissions of the EUT on the Operating Channel for duration greater than 30 minutes after the Master Device is shut off.

7.3 Test data

1).Radar Type 0

Marker 1 : End of Burst : 22.32 s Marker 2 : End of Burst + 10 s : 32.32 s

1-22-3 Megumigaoka, Hiratsuka-shi, Kanagawa-ken, 259-1220 JAPAN

^{*} Measurement non-occupancy period: 31.46 minutes or more (1920 [s] – 32.32 [s] = 1887.68 [s] = 31.46 [minutes])

Test report No. : 12656071S-X-R1 Page : 20 of 22

Issued date : September 27, 2019 FCC ID : BKEHDH002

2). Master is shut off

Marker 1 : End of Burst

: 23.52 s

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

Test Item:

DFS: Dynamic Frequency Selection

1-22-3 Megumigaoka, Hiratsuka-shi, Kanagawa-ken, 259-1220 JAPAN
