No part of this publication may be reproduced or distributed in any form or by any means, or stored in a database or retrieval system, without the prior written permission of the publisher. DBTEL Incorporated reserves the right to make changes in technical and product specifications without prior notification. Address: No.29, Tzu Chiang St, Tu-Cheng, Taipei, Taiwan. Website: http://www.dbtel.com.tw

Warning: Use only approved accessories and battery. Do not connect to any incompatible products; otherwise, it will invalidate the warranty applying to your mobile phone.

The font type of the legend, graphics or icons in the user manual may differ from that shown on the handset.

Safety Information

For your safety, please read the guidelines below carefully before you use your phone: Exposure to Radio Frequency Signals

Max. SAR Measurement (1g) PCS1900 Head: 0.62 W/kg Body : 0.34 W/kg

Your wireless handheld portable telephone is a low power transmitter and recommendations for the protection of public exposure to RF electromagnetic energy.

- International Commission on Non-Ionizing Radiation Protection (ICNIRP) 1996
- Verband Deutscher Elektringenieure (VDE) DIN- 0848
- · Directives of the European Community, Directorate General V in Matters of Radio Frequency Electromagnetic Energy
- National Radiological Protection Board of the United Kingdom, GS 11, 1988
- American National Standards Institute (ANSI) IEEE. C95.1- 1992
- National Council on Radiation Protection and Measurements (NCRP). Report 86
- Department of Health and Welfare Canada. Safety Code 6

These standards are based on extensive scientific review. For example, over 120 scientists, engineers and physicians from universities, government health agencies and industry reviewed the available body of research to develop the updated ANSI Standard.

The design of your phone complies with these standards when used normally.

This device complies with part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference

### Notice

To reduce exposure to electromagnetic radiation, use it with properly. SAR Radiation Limit: 1.6 W/Kg Tested SAR Rating: 0.62 W/Kg

### Safety Information

DBTEL handset is the first Specific Absorption Rate (SAR) compliance in Taiwan. Compliance with International standard SAR Radiation Limit: 1.6 W/Kg Tested SAR Rating: 0.62 W/Kg

### **Product Safety**

Product safety is always the first priority of DBTEL Incorporated. With the SAR Safety Certificate, the persistence we insist on has been proved that to be right, again. Customer's safety is of paramount importance to us, there is no exception.

### **FCC** requirements

A declaration of conformity to the essential requirements.

Identification of the United States of America in which the equipment is intended to be used. Identification of the public telecommunication network to which the equipment is intended to be connected.

"Hereby, we <DBTEL Inc.>, declares that this F12C is in compliance with the essential requirements and other relevant provisions of "FCC Part 2(Section 2 1093) & FCC OET Bulletin 65".

### SAR (FCC)

This Model phone meets the FCC Requirements for exposure to radio waves.

Your Mobile Phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the limits for exposure to radio frequency (RF) energy recommended by the United of States. These limits are part of comprehensive guidelines and established permitted levels of RF energy for the general public. The guidelines were developed by independent scientific organizations through the evaluation of scientific studies. The limits include a substantial safety margin designed to ensure the safety of all persons, regardless of age and health.

The exposure standards for mobile phones employ a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit recommended by FCC is 1.6 W/kg. \* Tests for SAR have been conducted using normal operating conditions with the phone transmitting at the highest certified power in all tested frequency bands. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to the station antenna, the lower the power output.

Before a phone model is available for sale to the public, compliance with FCC must be shown. One of the essential requirements of this directive is the protection of the health and safety for the user and any other person. The highest SAR value for this model phone when tested for compliance against the standard is 0.62 W/kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the FCC requirement for RF exposure.

The SAR limit for mobile phones for public use is 1.6 watts/kilogram (W/kg) averaged over ten grams of body tissue. The limit incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

### For Your Safety

### Road safety

e proper control of your car at all times. Do handheld phones while driving.

### **Special regulations**

switch off your mobile wherever use is ed, such as in hospitals, as it may cause nce with medical equipment.

### Electronic devices

phones may interfere with appliances such mputers, televisions and other radio ent.

### Other medical devices

phones may interfere with signals of I medical devices, such as pacemakers or aids. Consult your doctor for advice before using the mobile.

### Aircraft

e of mobile phone is prohibited in the air. off your phone before boarding an aircraft.

### Accessories and battery

ly approved accessories and batteries. Do nect to any incompatible product. This will te any warranty applying to your mobile phone and may be dangerous.

### Disposal

obile phone and other accessories must be d of properly. They must not be thrown away cipal waste! Please dispose of used mobile phones and other accessories in accordance with

local regulations.

### Potentially explosive atmospheres

off your phone when in or near explosive uch as petrol stations and chemical plants.

### Emergency calls

sure your phone is switched ON and in a **Sos** area with adequate reception.

When in idle mode, key in the emergency number 112 or 000 and press 📐 to be connected to the emergency services.

Provide all the necessary information as accurately as possible. Do not hang up until you are told to do SO.

Even when the keylock is activated, emergency calls can still be made.

⊾ If a PIN is set when switching on the mobile phone, you will be asked for the PIN code. You can make an emergency call without entering the PIN

code. Press 🔊 (SOS) followed by 🔊 (Yes) to make an emergency call.

### Your 2901

Key description

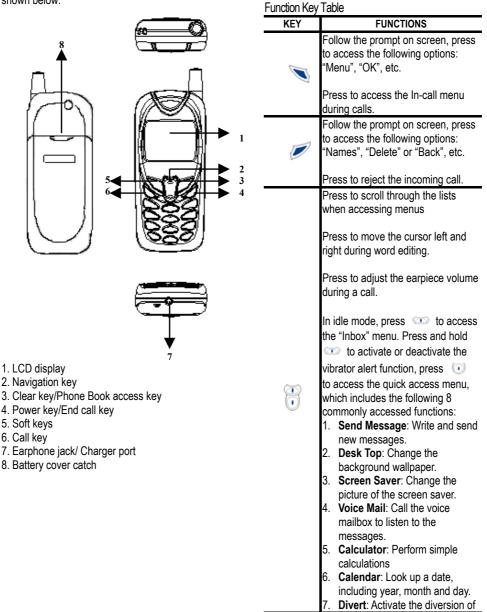

the keys on the keypad:

The following tables provide you the description of

### Your phone

Your mobile phone is a radio transceiver. When the phone is turned on, it transmits and receives radio frequency (RF) signals.

The front and back views of the 2901 handset are shown below:

# Your 2901

	<ul><li>calls.</li><li>Alarm Clock: Activate the alarm settings.</li></ul>
	Press to place a call or answer an incoming call.
0	In idle mode, press to view the recently dialed, received and missed phone call list with 10 entries each. Press Solution to call the selected number.
4	In idle mode, press and hold to turn the phone on and off.
	During a call, press to end an active call.

### Alphanumeric key table:

Key	UPPER CASE (ABC)	LOWER CASE (abc)	NUMBER INPUT
10	blank		1
2.40	ABC	abc	2
0 <sup>2</sup> 3	DEF	def	3

	Call divert. Shown when the unconditional	
58	divert call is activated.	
	Headset. Shown when the headset is	
$\cap$	connected to the jack and the headset	
	function is enabled.	

### Installation

### UIM card and battery

₭ Keep the UIM card and batteries out of the reach of small children.

### Installation of the UIM card and the battery

 Before proceeding, ensure that the phone is switched off. With the back of the phone facing you, press the battery cover catch on the back of the phone downward and lift the battery cover.

Push the battery to the left (apply some force), lift it up and remove the battery from the battery slot.

 Insert the UIM card into the UIM cardholder, ensuring that the angled corner is on the lower right-hand side with the gold metallic contact surface facing downwards.

 Replace the battery with its catch pins inserted into the catch slots and push downwards until it is firmly seated in the battery slot. Then replace the battery cover and push upward until it clicks into place.

### Removal of the UIM card and the battery

Repeat the same procedure described in the "Installation of the UIM card and the battery" to remove the UIM card and the battery. Gently remove the UIM card, press down the tab over the UIM cardholder and pull the UIM card out.

### Battery Information

### Battery

### Battery charging

- ➡ Use only the approved battery and charger supplied by the phone manufacturer.
- 1. Plug the connector of the travel charger into the charger port at the bottom of the phone.

 Plug the charger into the AC power supply socket and the battery indicator will start to scroll. You can use the phone, if switched on while it is charging.

The message "charging" will be displayed after you have connected it to the power supply.

- 3. When the battery is fully charged, the battery indicator will stop scrolling.
- While charging, make sure the charger is firmly connected to the charger port.
- ! When charging the battery for the first time, charge it for at least 12 hours.
- ! For optimum battery power performance, 5 hours of battery charging is recommended.
- ! Do not remove the battery while charging is in progress to avoid causing damage to your phone.

### Battery specifications

Please refer to "Accessories" of "Reference Information" or the battery label.

### Notice on battery charging and discharging

Nour phone is powered by a rechargeable battery.

- $\mathbf{k}$  Use only the specified charger supplied by
- manufacturer for charging. Any other type may be dangerous.

- Note that the new battery will only reach its best performance after being fully charged and discharged 2 or 3 times.
- When the charger is not in use, disconnect it from the power supply. Do not leave the battery on continuous charge for more than one week, as overcharging will shorten the battery life. If a fully charged battery is left unused, it will slowly discharge itself over time.
- An environment with extremely high or low temperatures will affect the battery charging. Optimum charging will be achieved in moderate temperatures.
- If the indicator of the desktop charger does not light up or keeps flashing while charging, remove your phone or battery and insert them to the desktop charger again until it lights up and starts charging.

### Low battery indicator

When the battery is low, with only a few minutes of communication time left, the handset will warn you with an alert tone and the "Battery Low" message will be displayed.

### Use of battery

- Never use a damaged or non-recommended charger or battery.
- Keep the battery at a temperature between 10°C to 40°C (50°F to 104°F). The effectiveness of your battery is particularly affected in temperatures below 0°C (32°F).

### Battery disposal

- Do not dispose of the battery in a fire. This may cause a serious risk of explosion and/or release of highly toxic chemicals.
- Ensure that the battery is disposed of or recycled properly.
- The battery must not be disposed of in municipal waste.

### Quick & Easy

This page provides some of the basic operations for using your phone. For more detailed information, refer to "User Manual".

#### Before Use

- 1. Remove the battery and insert your UIM card, then re-install and charge the battery. For more details, please refer to "Installation".
- Press and hold so to turn on your phone. Wait until the name of the network operator appears on the screen.
   Call Functions

33

This menu is shown only if your UIM card provides additional services. The name and contents of this menu depend on the services available.

For availability, rates and information on using the UIM service, check with your network service provider.

### Maintenance

Your mobile telephone is a radio transceiver, built with precision electronic parts, and it needs to be used with care. Observing the following recommendations may prolong the phone's life.

Please note the following points:

- ₭ Keep the phone and its accessories out of the reach of small children.
- Keep it dry. Avoid contact with liquids. Humidity and liquids contain minerals which corrode electronic circuits.
- ➢ Do not expose the phone to an extremely cold environment, as this will cause a build-up of moisture within the phone.
- ➢ Do not expose the phone to extreme heat as high temperatures will shorten the life of electronic parts, damage the battery, and cause some plastic material parts to become deformed or to melt.
- ➢ Do not attempt to disassemble the phone. Non-expert handling of the phone may damage it.
- ➢ Do not use harsh chemicals, cleaning solvents or strong detergents to clean the phone. The phone may be cleaned with a soft cloth slightly dampened in warm water.
- $\mathbf{k}$  Do not paint or otherwise coat, the phone.
- ➡ Do not use accessories, such as batteries designed for other mobile phones, or any other unapproved accessories. This will damage the phone, violate the radio equipment regulations and invalidate your warranty.

### Access Codes

There are several codes required to access the handset and UIM card. The access codes allow you to avoid unauthorized use of your phone and UIM card.

### PIN Code

The PIN (Personal Identification Number) protects the card against unauthorised use. This code is supplied with the UIM card. If the PIN is set to "Enable PIN," the code is requested when the phone is switched on.

If you enter an incorrect PIN code three times in succession, the UIM card is blocked, key in the PUK code.

### PIN2 Code

This code is supplied with the UIM cards and is required to access certain functions, such as accumulated costs. If your UIM card supports those particular functions, you can activate them from your handset. If you enter an incorrect PIN2 code three times in succession, the PIN2 code is blocked and you will be asked for the PUK2 code.

### PUK code

The PUK (Personal Unblocking Key) code is used to unblock and change the locked PIN code. This code may be supplied with the UIM card. If this is not the case, check with your network service provider for the code. If you enter an incorrect PUK code ten times in succession, your UIM card will no longer be valid.

Contact your network service provider to replace the UIM card.

### PUK2 code

The PUK2 code is used to unblock and change the locked PIN2 code. This code is supplied with the UIM. If you enter an incorrect PUK code ten times in succession, the functions that require PIN2 code for activation are no longer valid.

Contact your network service provider to replace the UIM card.

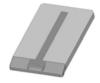

### Accessories

The accessories for the 2901 (GSM/DCS) mobile phone include battery, charger etc. Please refer to the "Battery Charging" section for the battery charging method.

### Battery

At present, the rechargeable battery approved by the manufacturer is the lithium battery (Li-Ion).

The talk time and standby time for a new battery is about 2–6 hours and 50-150 hours respectively. When the battery is fully charged, you can have a continuous talk time for few hours and standby time for a few days. The capacity of a battery may vary depending on the environment, networks, UIM card or options available.

### <u>Charger</u>

This is a lightweight charger compatible with a multi-voltage supply. Do not connect it to an incompatible product. It charges the phone battery rapidly. To start charging, plug the charger into a power supply and insert the other end into the charge port at the bottom of your phone to start charging.

The required charging time is approximately 5 hours. The battery charging status can be checked on the mobile phone display.

and the second s

### Problem Solving

### **Problem Solving**

- 1. When you switch on your phone, "Insert UIM card" is displayed
- a. Check that the UIM card is correctly installed.b. Ensure that the gold chip is not damaged or scratched.
- c. Check the UIM card contacts. If they are dirty, clean them with an antistatic cloth.
- 2. When your phone shows "PIN", "PIN2", "PUK", "PUK2", and "Barring code".
- a. Please contact your network service provider for the numbers.
- b. If you enter the wrong PIN code three times in succession, the UIM card will be blocked.
- c. For the PUK code, check with your network service provider.

### 3. No connection to network.

- Check the signal strength meter in the display. If the signal is weak, move to an open space or move closer to a window and try again.
- b. Contact your network service provider for further details.

### 4. Your correspondent cannot hear you.

- a. Check that the network signal strength is normal and try again.
- b. Check that the earphone is unmuted.
- c. Holding the phone close to your mouth.

### 5. The battery won't charge

- a. Check that the charger is properly connected.
- b. The message "Charging" will only be shown when you charge the battery with the handset switched off.

### 6. You can't make calls.

a. Check the signal strength meter in the display. If the signal is weak, move to an open space or, if you are in a building, move closer to a window.

- b. The network is busy, please try again later.
- c. Check whether the call charge limit has been reached.

### 7. The battery drains faster than normal.

- a. Check whether are you in an area with unstable coverage as this may use extra battery power.
- b. Ensure that the mobile phone is not exposed to extreme temperatures. This will significantly reduce battery performance.

It is strongly recommended not to charge the battery for more that 24 hours. This will reduce the battery performance or cause damage to the battery.

### 8. The headset starts beeping.

The signal is weak or out of coverage.
