SIMILARITIES and DIFFERENCES BETWEEN DB1 AND IPBS2

This letter is to explain the electrical similarities and differences between DB1 and IPBS2 DECT Base Stations.

Similarities:

- All radio parts from base band, all the way to antennas are identical from a schematic and layout perspective. This has also been verified at Gerber file level.
- BMC (Burst Mode Controller) for radio is the same, but there are some differences how memories are interfaced.
- Identical antennas positioned at the same location on the PCB.

Differences:

- In general, all function-blocks except radio are different.
- Power blocks contain similar types of DC/DC converters and LDO's, but with different rating.

Very truly yours, .

Lena Kindmark
Certification Engineer
