### STATEMENT OF COMPLIANCE

This equipment has been tested in accordance with the standards identified in the referenced test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report and demonstrate that the equipment complies with the appropriate standards.

I attest that the necessary measurements were made by me or under my supervision, at Timco Engineering, Inc. located at 849 N.W. State Road 45, Newberry, Florida 32669 USA.

**Authorized by:** Mario de Aranzeta

# REPORT SUMMARY

Disclaimer	The test result only relates to the item tested.
<u> </u>	To demonstrate compliance with FCC Pt 15.235 requirements for a R/C toy transmitter.
Applicable Rule(s)	FCC Pt 15.235, ANSI C63.4 2003
Related Report	No related report

### TEST ENVIRONMENT AND SYSTEM

Test Facility	Timco Engineering Inc. 849 NW State Road 45 Newberry, FL 32669 USA.
Test Condition:	The DUT was tested in a laboratory with normal temperature and humidity. The temperature was 26°C with relative humidity of 50%.
Test Exercise (e.g software description, test signal, etc.):	The DUT was placed in continuous transmit mode of operation.
Supporting Peripheral Equipment	Not applicable. The device is a stand-alone radio.
Deviation to the standard(s)	No deviation from the standard(s)
Modification to the DUT:	No modification was made to the DUT.

APPLICANT: Scientific Toys, Ltd.

FCC ID: BY34318-49SP

#### TEST PROCEDURE

**Radiation Interference**: The test procedure used was ANSI standard C63.4-2003 using a Agilent spectrum analyzer with a preselector. The bandwidth of the spectrum analyzer was 100 kHz with an appropriate sweep speed. The analyzer was calibrated in dB above a microvolt at the output of the antenna. The resolution bandwidth was 100 kHz and the video bandwidth was 300 kHz.

**Occupied Bandwidth**: A small sample of the transmitter output was fed into the spectrum analyzer and the following plot was generated. The vertical scale is set to 10 dB per division.

**Formula Of Conversion Factors**: The field strength at 3m was established by adding the meter reading of the spectrum analyzer (which is set to read in units of dBuV) to the antenna correction factor supplied by the antenna manufacturer. The antenna correction factors are stated in terms of dB. The gain of the preselector was accounted for in the spectrum analyzer meter reading.

## Example:

Freq (MHz) METER READING + ACF +CL= FS 33 20 dBuV + 10.36 dB/m+1.2 = 31.56 dBuV/m @ 3m

**ANSI Standard C63.4-2003 10.1.7 Measurement Procedures:** The DUT was placed on a table 80 cm high and with dimensions of 1m by 1.5m. The DUT was placed in the center of the table. The table used for radiated measurements is capable of continuous rotation. The spectrum was scanned from 30 MHz to 10th harmonic of the fundamental.

Peak readings were taken in three (3) orthogonal planes. The highest readings were reported.

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

### RADIATION INTERFERENCE

**Rules Part No.:** 15.235, Pt 15.209

**Requirements:** Carrier frequency will not exceed 80 dBuV/m at 3m. Out-of-band

emissions shall not exceed:

Fundamental Frequency	Field Strength of Fundamental
(MHz)	(dBµV)
30 – 88	40.0
88 – 216	43.5
216 – 960	46.0
Above 960	54.0

### Test Data:

Emission	Meter	Ant.	Coax	Correction	Field	Margin

#### OCCUPIED BANDWIDTH

**Rules Part No.**: 15.235

**Requirements**: The field strength of any emissions appearing between the band edges and up to 10 kHz above and below the band edges shall be attenuated at least 26 dB below the level of the un-modulated carrier or to the general limits of 15.209, whichever permits the higher emission levels.

**Test Data:** The following plot represents the emissions for this device.
