Attn: Director of Certification

RE: Class II Permissive Change

FCC ID: BYMBASE6000
IC: 1860A-COM6000

We are introducing the EC20 - Extended Coverage Antenna Kit, which was designed for use with the Base 6000, which is FCC-certified and is intended for use in industrial or commercial environments only and is not intended for use by or for sale to the general public.

EC20 Kit includes Antenna Adaptor Cable with RP TNC Plug, 100 ft Cable, Lightning Arrestor and 8dBic Flat Patch Antenna. Directional antenna with 8dBic gain is used to partially compensate for losses in the 100 ft cable and the other Kit's components. To comply with FCC rules total EC20 gain must be no greater than 0dBi.

Based on the above, the EC20 must be purchased only from HME authorized dealers, and must be professionally installed by HME certified professionals.

Sincerely,

Karl Knoblock
Electrical Engineering Manager
HM Electronics Inc.
