Subject: Non applicability of SAR (Specific Absorption Rate) evaluation

EUT Specification:

Frequency Range:	<i>468.4875 MHz to 469.8875 MHz</i>
Threshold Calculation:	<i>60/f_(GHz) 60/0.4698875 127.7mW</i>
Output Power:	<i>54.1mW (<127.7mW)</i>

The EUT is a Part 90 non-SMR (Specialized Mobile Radio) which is categorically excluded from routine environmental evaluation for RF exposure as per §2.1093(c). As per KDB 447498 1) c), portable devices with output power of $60/f_{(GHz)}$ are exempt to include SAR data for equipment approval. The threshold calculation presented herein does not include 50% PTT (push-to-talk) duty cycle.
