

BZ5DTT250M  
Application for FCC Certification  
250 Watt Digital Television Translator

## Power Measurements

The translator's power meter circuit uses a detected sample from a coupler on the output. An averaging detector circuit provides the DC level to drive the translator's output level meter.

The translator was connected to a test load through a calibrated directional coupler. The spectrum analyzer's "Channel Power" function was used to measure the average power level of the signal as sampled through the directional coupler. (see Fig.) .

Measured power: 10.1 dBm

Coupling loss: -43.9 dB

Attenuator @ i/p to  
spectrum analyzer 0 dB

Power: 54 dBm

Power = 250 Watts
