Subject: Class II Permissive change for **FCC ID: C3K1957** (Original Grant date: **2/24/2020**)

TO WHOM IT MAY CONCERN:

This is to request a Class II permissive change for **FCC ID: C3K1957**, originally granted on **2/24/2020**. This module will be integrated in a host that uses SAR power back-off mechanism. The changes filed under this application are:

Change 1: SAR testing was performed to consider the portable exposure conditions. We understand that the power control mechanism needs to be implemented per the applicable KDB. The module will be operated at the maximum rated powers detailed in the SAR report. The powers are the same as the module certified power levels.

Radiated emissions and conducted power spot checks were performed as per the latest modular requirement guidance.

The maximum power setting level for all channels is either equal to or lower than the modular certified power levels. The antenna is of the same type with equal or lower gains than original approval.

Sincerely,

A handwritten signature in black ink, appearing to read "Chaitrali".
