FCC ID: C3K2023

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances ≤ 50 mm, the SAR test exclusion threshold is determined according to the following
[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]
x [√f(GHz)] ≤ 3.0

1. SAR test exclusion threshold
Frequency: 2480MHz (min. separation distances = 5 mm)
SAR test exclusion thresholds (5 mm) = 3 x 5 / (√ 2.480) = 9.525 mW

Max. Tune-up Tolerance (mW)	SAR Test Exclusion Thresholds (5mm) (mW)
2	9.525

Calculation Value: 2 (mW) / 5 (mm) x √ 2.480 = 0.63

So, Calculation value ≤ 3.0

Remark:

-Max. conducted power 1.26 mW is closet 2 mW, so 2 mW was calculated.
-When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
