

## ■ OPERATION DESCRIPTION

Rated voltage of this model is 220V AC, 60Hz and rated power output is 900W.

After main power supply, When we press Start button, DC 5V enter the micom of Control

and Main relay on and then High voltage circuit formed.

DC 4KV be create by combination of H.V Transformer, H.V Capacitor and H.V Diode.

This high voltage, DC 4KV get into Magnetron and then Microwave generate.
