

### Product Equality Declaration

SRAM LLC declares for the following products:

Left Shifter		Right Shifter	
<b>Model</b>	00021	<b>Model</b>	00121
<b>FCC ID</b>	C9O-LSBB3	<b>FCC ID</b>	C9O-RSBB3

The only differences between the two devices (Left Shifter 00021) and Right Shifter (00121):

**1. F/W:**

the firmware is identical except for:

- pin assignment due to mirror image of left and right PCBAs
- identifier in COM after the components are paired into a system

**2. H/W:**

Looking at the schematic, left and right PCBAs look identical except for

- due to mirror image of left and right PCBAs, the microcontroller has different pin assignments
- due to different pin assignment of the micro, some of the trace layouts may vary, but due to the PCBAs being so small, the different is in millimeters or less

Therefore, Left Shifter antenna port test results are also representative for Right Shifter used.

Best Regards,
