Subject: Re: VHF & UHF Transmitter Question

Yes, you may do this. The Grant of Certification will show the normal frequency stability for the internal reference on the specifications line entry.

A comment on the bottom of the Grant will indicate that a high stability option is available.

The basic transmitter (FCC ID) will be officially recognized as having the basic (internal reference) stability capability.

Dear Frank:

We have a series of VHF and UHF Transmitters. There are two versions of each transmitter. Version 1 uses an internal frequency reference, and Version 2 uses a high stability external reference.

Can we family list both versions under the same FCC ID? Both versions are identical, except for the frequency reference.

Thank you in advance for your prompt reply.

Regards,

Joanne Backes
