This covering letter is in response to your e-mail dated 22 May 2001, EA 100054, FCC ID CASTEL0055, correspondence reference number 19368.

Question:

The MPE report indicates that the maximum power can be 5 W above 25 Watts for a total of 30 Watts. The MPE tests must be done at the maximum power. In this case, it is 30 Watts. Supply tests at 30 Watts and correct users guide and installation guide if needed.

Answer:

The transmitter power level has been reset to 30 Watts and the measurements repeated. The results are uploaded with this letter. The results are well inside the limit so no changes to the User's Guide and Installation Guide have been made.
