REPORT NUMBER 2564 FCC ID: CASTMAK5D

TELTEST Laboratories

Tait Electronics Limited PO Box 1645 558 Wairakei Road Christchurch New Zealand

Phone: (64) (3) 3583399 Fax: (64) (3) 3580432

TEST: FCC 47 CFR 1.1310 Maximum Permissible Exposure

ENVIRONMENTAL ASSESSMENT

On the TMAB24-K500 Mobile Transceiver S/N: 19226272

In accordance with

ANSI/IEEE Std C95.1, 1999

OET Bulletin 65 97-01 and Supplement C (Edition 01-01)

DATE: 8 March 2007

PREPARED BY: Robin Kidson

Test Technician

CHECKED & APPROVED BY: SA Crompton

Laboratory Manager

FCC ID: CASTMAK5D Page 3 of 11

Operating and Exposure conditions:

Operating Conditions: Mobile transmitter using vehicle mounted antennas only

Exposure conditions: Occupational/Controlled Exposure (operator).

General Population/Uncontrolled (passengers and

bystanders)

Safe Distance:

Recommended Minimum lateral safe distance from the antenna: 90 cm

Limit:

Occupational/Controlled Exposure:

30 - 300 MHz: 1.0 mW/cm^2 300 - 1500 MHz $f/300 \text{ mW/cm}^2$

for test frequency of $762.0125MHz = 2.54 \text{ mW/cm}^2$

for test frequency of 806.0125MHz = 2.69 mW/cm²

General population/Uncontrolled Exposure:

30 - 300 MHz: 0.2 mW/cm^2 300 - 1500 MHz $f/1500 \text{ mW/cm}^2$

for test frequency of $762.0125MHz = 0.508 \text{ mW/cm}^2$

for test frequency of $806.0125MHz = 0.537 \text{ mW/cm}^2$

Recommended Antennas:

Antenna Type: Monopole ($\lambda/4$ antenna)

Antenna Gain: 2.15 dBi

Antenna Type: Monopole (Collinear antenna)

Antenna Gain: 5.65 dBi

FCC ID: CASTMAK5D Page 4 of 11

Measurement Guidance:

2) Mobile PTT – Parts 80, 90

- a) §2.1033(c)(3) requires device operating and installation instructions to be submitted during equipment certification; instructions should include the minimum separation distance and other constraints required for the device and its antenna(s) to meet MPE limits
- b) Per definition of a mobile device a minimum separation distance of 20 cm is required
- i) Antenna installation conditions should maintain the estimated minimum MPE separation distance
- ii) A separation distance based on MPE evaluation (measurement or computer modeling) that is smaller than the estimated MPE distance may be used if it is applicable for the antenna installation conditions
- c) Basic RF exposure instructions are requested for devices that meet general population exposure requirements, as part of the §2.1033(c)(3) required operating instructions; RF exposure training instructions and labeling info are requested for devices that satisfy occupational exposure requirements Federal Communications Commission OET Laboratory Division March 18, 2004

Test Results:

NAME OF TEST: TRANSMITTER OUTPUT POWER (CONDUCTED)

TEST CONDITIONS: Ambient Temperature 22 °C

Relative Humidity 35 %

SPECIFICATION: FCC 47 CFR 2.1046

GUIDE: TIA/EIA-603 2.2.1

MEASUREMENT PROCEDURE:

1. The Equipment Under Test (EUT) was connected to an RF Power meter using a coaxial attenuator with an impedance of 50 Ohms.

2. The unmodulated output power was measured.

MEASUREMENT RESULTS:

| Transmit Frequency: | 762.0125 | MHz |
|---|----------|-------|
| Manufacturer's Rated Output Power | 30 | Watts |
| Supply Voltage, motor idling, transmitting. | 13.21 | Volts |
| Measured Output Power | 29.2 | Watts |
| Measurement Uncertainty (dB) | ± 0.5 | dB |

FCC ID: CASTMAK5D Page 5 of 11

| Transmit Frequency: | 806.0125 | MHz |
|---|----------|-------|
| Manufacturer's Rated Output Power | 35 | Watts |
| Supply Voltage, motor idling, transmitting. | 13.21 | Volts |
| Measured Output Power | 35.8 | Watts |
| Measurement Uncertainty (dB) | ± 0.5 | dB |

Maximum Transmit Power is set in the factory within a margin of +2 / -1 watt. This setting is not adjustable by the user. The MPE results are scaled to simulate results with a 50% duty cycle and transmit powers of 32 watts (762.0125 MHz) and 37 watts (806.0125 MHz) to allow for the factory power set margins.

NAME OF TEST: ENVIRONMENTAL ASSESSMENT

SPECIFICATION: FCC 47 CFR 1.1310

Measurement Method:

Field strength measurements were performed for two antenna positions on a representative vehicle (Honda Accord 2001 LXI four door sedan, dimensions 185.5 long, 71.5 wide and 57.1 inches high). See Appendix A for details.

External Field strength readings were recorded at four positions 20 cm from the car body, to represent the closest position for a bystander. Measurements were taken at 20 cm intervals vertically over a height of 2 metres.

Internal field strength readings were recorded in the front and back seat locations in the areas where the highest field strength is found.

Measurements were made in an area 40cm wide representing the head and upper and lower torso. Spatial averaging is carried out to determine the MPE result (IEEE C95.1 3.29).

Roof mounted antenna:

Position A: 90 degrees to side of car, 20 cm from the body, on a line intersecting the roof antenna position.

Trunk mounted antenna:

Position B: 90 degrees to side of car, 20 cm from the body, on a line intersecting the trunk antenna position.

Position C: Rear of car, 20 cm from the body, on a line intersecting the trunk antenna position and the rear corner of the car.

Position D: 90 degrees to rear of car, 20 cm from the bumper, on a line intersecting the trunk antenna position..

Calculations of average power for 762.0125 MHz (sum of results/number of results):

Information to be placed in User/Installation manual:

Warning:

Warning: RF Exposure Hazard

To comply with FCC RF exposure limits, this product must be installed using an antenna mounted either centrally on the roof with a gain of 2.15dBi or 5.65 dBi, or centrally mounted on the trunk with a gain of 5.65dBi. This antenna must not be mounted at a location such that any person or persons can come closer than 0.9m (35 inches) to the antenna.

Safety Training Information:

Warning: FCC RF Exposure Limits

This product generates RF (radio frequency) energy during transmissions. This device must be restricted to work-related use in an occupational/controlled exposure environment. The radio operator must have control of the exposure conditions and duration of all persons exposed to the antenna of this transmitter to satisfy FCC RF exposure compliance.

- This device is not approved for general population use.
- This device must only be used with authorized accessories and antennas. The operator must ensure that the minimum safe distance of 0.9m (35 inches) between persons and the antenna is maintained during transmissions. This minimum safe distance is based on the assumption that there is a duty cycle of 50% transmit mode to stand-by or receive modes. The radio is in transmit mode when the PTT (press-to-talk) key on the microphone is pressed and the control head red LED (light emitting diode) glows.

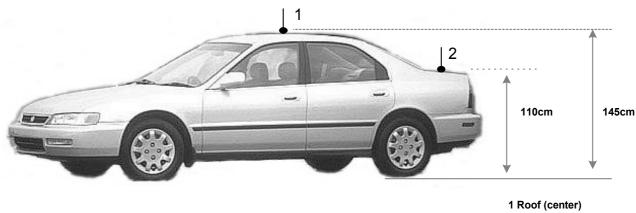

Please refer to the following website for more information on what RF energy is and how to control your exposure to assure compliance with established RF exposure limits.
