

## Measurement of Output Power With Duty Cycle Above 80%

Model Number: 051AHL4

Frequency (MHz)	Measurement (dBuV/m)	Limit (dBuV/m)
288	71.92	73.8
310	74.91	75.3
365	75.18	78.2
433	76.87	80.8

Note: All measurements were made using a 95% duty cycle. This was the highest duty cycle that the part would train to. Above this frequency, the part would not train. The measurement values contain no duty cycle correction factors.
