Forward

The following information is submitted for consideration in obtaining Grant of Certification for License Exempt Intentional Radiator operating under CFR 47 Paragraph 15.249 and Industry Canada RSS-210.

Name of Applicant: Digital Monitoring Products, Inc.

2500 North Partnership Boulevard Springfield, MO 65802-6310

Model: CellComSL

FCC I.D.: CCKPC0163 IC: 5251A-PC0163

Frequency Range: 908 MHz

Operating Power: 91.5 dBµV/m@3m average and 91.8 Peak, Occupied Bandwidth 112 kHz

Opinion / Interpretation of Results

Test Performed	Minimum Margin (dB)	Results
Antenna requirement per CFR 47 15.203	N/A	Complies
Restricted Bands (Tx) Emissions as per CFR 47 15.205 and RSS-210	-24.2	Complies
AC Line Conducted Emissions as per CFR 47 15.207	-12.5	Complies
Radiated Emissions as per CFR 47 15.209 and RSS-210	-14.0	Complies
Radiated Emissions per CFR 47 15.249 and RSS-210 (harmonics)	-24.2	Complies

Statement of Modifications and Deviations

No modifications to the EUT were required for the unit to demonstrate compliance with the CFR47 Part 15C or RSS-210 emissions requirements. There were no deviations or exceptions to the specifications.

Equipment Function and Configuration

The EUT is a 908 MHz low power transmitter used to interface wirelessly with compliant equipment in an alarm panel installation. The CellComSL Transceiver performs wireless notification to panel installation of for use in alarm system. The design operates from direct current only and offers no provision for connection to utility power systems. The manufacturer supplied an AC adapter for use in conducting AC line conducted emissions testing. The design incorporates authorized Cellular communications modules either (FCC ID: R17CE910NA and IC: 5131A-CE910NA) or (FCC ID: R17CE910-DUAL and IC: 5131A-CE910DUAL) to provide for emergency contact through cellular communications services. Testing of the CellComSL was performed with the EUT placed in the manufacturer-defined configuration. Test software was used during testing which allowed the unit to transmit at 100% duty cycle on defined channel. The unit typically resides in a low power state, which implies emission test results are higher than typical operation would provide. Testing of the CellComSL was performed with the EUT orientated in three orthogonal axis with worst-case emission presented. As requested by the manufacturer and required by regulations, the equipment was tested for emissions compliance using the available configurations with the worst-case data presented. Test results in this report relate only to the products described in this report.

Application for Certification

(1) Manufacturer: Digital Monitoring Products, Inc.

2500 North Partnership Boulevard

Springfield, MO 65802-6310

(2) Identification: Model: CellComSL

FCC I.D.: CCKPC0163 IC: 5251A-PC0163

(3) Instruction Book:

Refer to Exhibit for Instruction Manual.

(4) Description of Circuit Functions:

Refer to Exhibit of Operational Description.

(5) Block Diagram with Frequencies:

Refer to Exhibit of Operational Description.

(6) Report of Measurements:

Report of measurements follows in this Report.

(7) Photographs: Construction, Component Placement, etc.:

Refer to Exhibit for photographs of equipment.

- (8) List of Peripheral Equipment Necessary for operation. The equipment operates from direct current power only and offers no other interface provision than those indicated in this filing.
- (9) Transition Provisions of 15.37 are not being requested.
- (10) Not Applicable. The unit is not a scanning receiver.
- (11) Not Applicable. The EUT does not operate in the 59 64 GHz frequency band.
- (12) The equipment is not software defined and this section is not applicable.

Applicable Standards & Test Procedures

In accordance with the Federal Communications Code of Federal Regulations, dated October 1, 2014, Part 2, Subpart J, Paragraphs 2.907, 2.911, 2.913, 2.925, 2.926, 2.1031 through 2.1057, and applicable parts of paragraph 15, Part 15C Paragraph 15.249 and Industry Canada standard RSS-210 Issue 8 and RSS-GEN Issue 4, the following information is submitted. Test procedures used are the established Methods of Measurement of Radio-Noise Emissions as described in ANSI C63.10-2013.

Equipment Testing Procedures

AC Line Conducted Emission Test Procedure

Testing for the AC line-conducted emissions was performed as defined in ANSI C63.10-2013. The test setup, including the EUT, was arranged in the test configurations as presented during testing. The test configuration was placed on a 1 x 1.5-meter wooden bench, 0.8 meters high located in a screen room. The power lines of the system were isolated from the power source using a standard LISN with a 50-µHy choke. EMI was coupled to the spectrum analyzer through a 0.1 µF capacitor internal to the LISN. The LISN was positioned on the floor beneath the wooden bench supporting the EUT. The power lines and cables were draped over the back edge of the table. Refer to diagram one showing typical test arrangement and photographs in exhibits for EUT placement used during testing.

Radiated Emission Test Procedure

The EUT was placed on a rotating 1 x 1.5-meter wooden platform, 0.8 meters above the ground plane at a distance of 3 meters from the FSM antenna. Radiated emissions testing was performed as required in CFR47 15, RSS-210 and specified in sections 6 and 7 of ANSI C63.10-2013. EMI energy was maximized by equipment placement permitting orientation in three orthogonal axis, raising and lowering the FSM antenna, changing the antenna polarization, and by rotating the turntable. Each emission was maximized before data was taken using a spectrum analyzer. The frequency spectrum from 9 kHz to 25,000 MHz was searched for during preliminary investigation. Refer to diagrams two and three showing typical test arrangement and photographs in the test setup exhibits for specific EUT placement during testing.

- 1. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 cm to 40 cm long see (see 6.2.3.1).
- 2. I/O cables that are not connected to an accessory shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m (see 6.2.2).
- 3. EUT connected to one LISN. Unused LISN measuring port connectors shall be terminated in 50 Ω loads. LISN can be placed on top of, or immediately beneath, reference ground plane (see 6.2.2 and 6.2.3).
 - 3.1 All other equipment powered from additional LISN(s).
 - 3.2 Multiple-outlet strip can be used for multiple power cords of non-EUT equipment.
 - 3.3 LISN at least 80 cm from nearest part of EUT chassis.
- 4. Non-EUT components of EUT system being tested.
- 5. Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop (see 6.2.3.1).
- 6. Edge of tabletop shall be 40 cm removed from a vertical conducting plane that is bonded to the ground plane (see 6.2.2 for options).
- 7. Antenna may be integral or detachable. If detachable, the antenna shall be attached for this test.

- 1. A LISN is optional for radiated measurements between 30 MHz to 1000 MHz, but not allowed for measurements below 30 MHz and above 1000 MHz. (See 6.4.3, 6.5.1, and 6.6.3.) If used, connect EUT to one LISN. Unused LISN measuring port connectors shall be terminated in 50Ω . LISN can be placed on top of, or immediately beneath, reference ground plane (see 6.2.2 and 6.2.3.1).
 - 1.1 LISN spaced at least 80 cm from nearest part of EUT chassis.
- 2. The EUT shall be placed in the center of the table to the extent possible. (See 6.2.3.1 and 6.3.4).
- 3. A vertical conducting plane, if used for conducted tests per 6.2.2, shall be removed for radiated emission tests.
- 4. Antenna may be integral or detachable, depending on the EUT.
- 5. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 cm to 40 cm long.

List of Test Equipment

A Rohde and Schwarz ESU40 and/or Hewlett Packard 8591EM was used as the measuring device for the emissions testing of frequencies below 1 GHz. A Rohde and Schwarz ESU40 and/or Hewlett Packard 8562A Spectrum Analyzer was used as the measuring device for testing the emissions at frequencies above 1 GHz. The analyzer settings used are described in the following table. Refer to the appendix for a complete list of test equipment.

AC Line Conducted Emissions (0.150 -30 MHz)					
RBW	AVG. BW	Detector Function			
9 kHz	30 kHz	Peak / Quasi Peak

Units of Measurements

Conducted EMI Data is in dBµV; dB referenced to one microvolt

Radiated EMI Data is in dBµV/m; dB/m referenced to one microvolt per meter

Sample Calculation:

RFS = Radiated Field Strength, FSM = Field Strength Measured

A.F. = Receive antenna factor, Gain = amplification gains and/or cable losses

RFS $(dB\mu V/m @ 3m) = FSM (dB\mu V) + A.F. (dB/m) - Gain (dB)$

Environmental Conditions

Ambient Temperature 20.6° C

Relative Humidity 39%

Atmospheric Pressure 1016.3 mb

Intentional Radiators

As per CFR47, Subpart C, paragraph 15.249 and RSS-210 the following information is submitted.

Antenna Requirements

The equipment design contains permanently attached antenna design etched on the printed circuit board. The equipment offers no provision for user service, replacement, or antenna modification. The antenna connection point complies with the unique antenna connection requirements. The requirements are fulfilled and there are no deviations or exceptions to the specification.

Rogers Labs, Inc. 4405 W. 259th Terrace Louisburg, KS 66053 Phone/Fax: (913) 837-3214

Revision 2

Digital Monitoring Products, Inc. Model: CellComSL SN: Tx 1 Test #: 150430

Test to: FCC (15.249), RSS-210 File: DMP CellComSL TstRpt 150430 r2 FCC ID: CCKPC0163 IC: 5251A-PC0163 Date: May 12, 2015 Page 13 of 28

Restricted Bands of Operation

The EUT utilizes frequency, determining circuitry, which generates harmonics falling in the restricted bands. Spurious emissions falling in the restricted frequency bands of operation were measured at the OATS. Emissions were investigated using appropriate antennas or pyramidal horns, amplification stages, and a spectrum analyzer. Peak and average amplitudes of frequencies above 1000 MHz were compared to the required limits with worst-case data presented below. Test procedures of ANSI C63.10-2013 paragraph 6 and KDB 558074 paragraph 10.2 were used during testing. No other significant emission was observed which fell into the restricted bands of operation. Computed emission values take into account the received radiated field strength, receive antenna correction factor, amplifier gain stage, and test system cable losses.

Table 1 Radiated Emissions in Restricted Bands Data

Frequency in MHz	Horizontal Peak (dBµV/m)	Horizontal Quasi-Peak (dBµV/m)	Horizontal Average (dBµV/m)	Vertical Peak (dBµV/m)	Vertical Quasi-Peak (dBµV/m)	Vertical Average (dBµV/m)	Limit @ 3m (dBµV/m)
2725.2	39.6	N/A	29.8	37.9	N/A	27.2	54.0
3633.6	37.2	N/A	24.9	37.0	N/A	24.9	54.0
4542.0	37.3	N/A	24.8	37.2	N/A	24.7	54.0
5450.4	42.9	N/A	29.5	42.1	N/A	29.5	54.0

Other emissions present had amplitudes at least 20 dB below the limit. Quasi-Peak amplitude emissions are recorded above for frequency range of 30-1000 MHz. Average amplitude emissions are recorded above for frequency range above 1000 MHz.

Summary of Results for Radiated Emissions in Restricted Bands

The EUT demonstrated compliance with the radiated emissions requirements of CFR 47 Part 15C and RSS-210 Intentional Radiators. The EUT demonstrated a minimum margin of -24.2 dB below the requirements. Peak, Quasi-peak, and Average amplitudes were checked for compliance with the regulations. Worst-case emissions are reported. Other emissions found in the restricted frequency bands presented at least 20 dB below the requirements.

AC Line Conducted Emissions Procedure

Rogers Labs, Inc. 4405 W. 259th Terrace Louisburg, KS 66053 Phone/Fax: (913) 837-3214

Revision 2

Digital Monitoring Products, Inc. Model: CellComSL SN: Tx 1 Test #: 150430

Test to: FCC (15.249), RSS-210 File: DMP CellComSL TstRpt 150430 r2 FCC ID: CCKPC0163 IC: 5251A-PC0163 Date: May 12, 2015 Page 14 of 28

The EUT was arranged in typical equipment configurations operating from AC power adapter. Testing was performed with the EUT placed on a 1 x 1.5-meter wooden bench 80 cm above the conducting ground plane, floor of a screen room. The bench was positioned 40 cm away from the wall of the screen room. The LISN was positioned on the floor of the screen room 80-cm from the rear of the EUT. Testing for the line-conducted emissions were the procedures of ANSI C63.10-2013 paragraph 6. The AC adapter for the EUT was connected to the LISN for lineconducted emissions testing. A second LISN was positioned on the floor of the screen room 80cm from the rear of the supporting equipment of the EUT. All power cords except the EUT were then powered from the second LISN. EMI was coupled to the spectrum analyzer through a 0.1 μF capacitor, internal to the LISN. Power line conducted emissions testing was carried out individually for each current carrying conductor of the EUT. The excess length of lead between the system and the LISN receptacle was folded back and forth to form a bundle not exceeding 40 cm in length. The screen room, conducting ground plane, analyzer, and LISN were bonded together to the protective earth ground. Preliminary testing was performed to identify the frequencies of each of the emissions, which demonstrated the highest amplitudes. The cables were repositioned to obtain maximum amplitude of measured EMI level. Once the worst-case configuration was identified, plots were made of the EMI from 0.15 MHz to 30 MHz then data was recorded with maximum conducted emissions levels. Refer to figures one and two showing plots of the AC Line conducted emissions of the AC Adapter configuration while operating the EUT.

1	506.000000000	kHz	16.35	Quasi Peak	-39.65

Other emissions present had amplitudes at least 20 dB below the limit.

Summary of Results for AC Line Conducted Emissions Results

The EUT demonstrated compliance with the AC Line Conducted Emissions requirements of CFR 47 Part 15B and other applicable Class B emissions requirements. The worst-case EUT AC Adapter configuration demonstrated a minimum margin of -12.5 dB below the FCC/CISPR Class B limit. Other emissions were present with amplitudes at least 20 dB below the limit and worst-case amplitudes recorded.

General Radiated EMI Testing Procedure

Preliminary testing was performed in a screen room with the EUT positioned 1 meter from the FSM. Investigations were performed to identify the frequencies, which produced the highest radiated emissions. Radiated emission investigations were performed from 9 kHz to 12,000 MHz with the EUT positioned in three orthogonal axes per regulations. Frequencies of interest were recorded for use during testing on the OATS. Each investigated emission was then maximized at the OATS site before final radiated emissions measurements were performed. Final data was taken with the EUT located at the open area test site at a distance of 3 meters between the EUT and the receiving antenna. Test procedures of ANSI C63.10-2013 were used during radiated emissions testing. Peak and average amplitudes of frequencies above 1000 MHz were compared to the required limits with worst-case data presented below. Measured emission levels were maximized by EUT placement on the table, changing cable location, rotating the turntable through 360 degrees, varying the antenna height between 1 and 4 meters above the ground plane and changing antenna polarization between horizontal and vertical. Antennas used were Loop from 0.09 to 30 MHz, Broadband Biconical from 30 MHz to 200 MHz, Log Periodic from 200 MHz to 1 GHz, and/or Biconilog from 30 MHz to 1000 MHz, Double-Ridge, and/or Pyramidal Horns and appropriate amplification stages above 1 GHz.

Table 4 General Radiated Emissions Data (worst-case)

Frequency in MHz	Horizontal Peak (dBµV/m)	Horizontal Quasi-Peak (dBµV/m)	Horizontal Average (dBµV/m)	Vertical Peak (dBµV/m)	Vertical Quasi-Peak (dBµV/m)	Vertical Average (dBµV/m)	Limit @ 3m (dBµV/m)
113.6	27.8	23.0	N/A	26.3	19.2	N/A	43.5
114.3	29.4	25.2	N/A	31.4	19.7	N/A	43.5
114.9	28.2	23.4	N/A	29.5	19.2	N/A	43.5
115.8	30.4	25.6	N/A	28.2	19.0	N/A	43.5
130.4	40.2	27.6	N/A	25.4	18.4	N/A	43.5
213.9	29.3	24.2	N/A	23.7	18.6	N/A	43.5
282.1	30.5	24.3	N/A	24.7	16.8	N/A	46.0
282.8	29.9	24.5	N/A	23.0	17.9	N/A	46.0
288.0	31.4	29.8	N/A	23.2	32.0	N/A	46.0

Other emissions present had amplitudes at least 20 dB below the limit. Quasi-Peak amplitude emissions are recorded above for frequency range of 30-1000 MHz. Average amplitude emissions are recorded above for frequency range above 1000 MHz.

Summary of Results for General Radiated Emissions

The EUT demonstrated compliance with the general radiated emissions requirements of CFR47 Part 15.249 and RSS-210. The EUT demonstrated a minimum margin of -14.0 dB below general radiated emissions requirements. There are no other significantly measurable emissions in the restricted bands other than those recorded in this report. Other emissions were present with amplitudes at least 20 dB below the requirements.

Operation in the Band 902 - 928 MHz

The power output was measured on an open area test site @ 3 meters. Test procedures of ANSI C63.10-2013 were used during testing. The EUT was placed on a wooden turntable 0.8 meters above the ground plane and at a distance of 3 meters from the FSM antenna. The peak and quasi-peak amplitude of frequencies below 1000 MHz were measured using a spectrum analyzer. The peak and average amplitude of frequencies above 1000 MHz were measured using a spectrum analyzer. The amplitude of each emission was recorded from the analyzer display. Emissions radiated outside of the specified bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in 15.209, whichever is the lesser attenuation. Refer to figures three and four demonstrating compliance of operation in the 902-928 MHz band. The amplitude of each radiated emission was measured on the OATS at a distance of 3 meters from the FSM antenna. The amplitude of each radiated emission was maximized by varying the FSM antenna height, polarization, and by rotating the turntable.

Other emissions present had amplitudes at least 20 dB below the limit.

Quasi-Peak amplitude emissions are recorded above for frequency range of 30-1000 MHz. Average amplitude emissions are recorded above for frequency range above 1000 MHz.

Summary of Results for Radiated Emissions of Intentional Radiator

The EUT presented compliant with the radiated emissions requirements of CFR47 Part 15.249 and RSS-210 with highest peak radiated emission level measured of 91.8 and average amplitude of 91.5 dB μ V/m at 3-meters. The EUT demonstrated a minimum margin of -24.2 dB below the harmonic emissions requirements. The EUT demonstrated a minimum margin of -24.2 dB below the emissions requirements for restricted bands. There were no other significantly measurable emissions observed in restricted bands other than those recorded in this report. Other emissions were present with amplitudes at least 20 dB below the requirements. The EUT demonstrated compliance with the specifications of CFR47 15.249 and RSS-210. There were no deviations or exceptions to the requirements.

Annex C Rogers Qualifications

Scot D. Rogers, Engineer

Rogers Labs, Inc.

Mr. Rogers has approximately 17 years' experience in the field of electronics. Engineering experience includes six years in the automated controls industry and remaining years working with the design, development and testing of radio communications and electronic equipment.

Positions Held

Systems Engineer: A/C Controls Mfg. Co., Inc. 6 Years

Electrical Engineer: Rogers Consulting Labs, Inc. 5 Years

Electrical Engineer: Rogers Labs, Inc. Current

Educational Background

- 1) Bachelor of Science Degree in Electrical Engineering from Kansas State University.
- 2) Bachelor of Science Degree in Business Administration Kansas State University.
- 3) Several Specialized Training courses and seminars pertaining to Microprocessors and Software programming.

Scot D. Rogers

Rogers Labs, Inc. 4405 West 259th Terrace, Louisburg, KS 66053

Attention:

Scot Rogers,

Re:

Measurement facility located at Louisburg

3 & 10 meter site

Date of Renewal: June 28, 2013

Dear Sir or Madam:

Your request for renewal of the registration of the subject measurement facility has been received. The information submitted has been placed in your file and the registration has been renewed. The name of your organization will remain on the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website www.fcc.gov under E-Filing, OET Equipment Authorization Electronic Filing, Test Firms.

Industry Canada Industrie

June 19, 2013

OUR FILE: 46405-3041 Submission No: 168037

Rogers Labs Inc. 4405 West 259th Terrace Louisburg KS, USA 66053

Attention: Mr. Scot D. Rogers

Dear Sir:

The Bureau has received your application for the renewal of 3/10m OATS. Be advised that the information received was satisfactory to Industry Canada. The following number(s) is now associated to the site(s) for which registration / renewal was sought (Site# 3041A-1). Please reference the appropriate site number in the body of test reports containing measurements performed on the site. In addition, please keep for your records the following information;

- The company address code associated to the site(s) located at the above address is: 3041A

Furthermore, to obtain or renew a unique site number, the applicant shall demonstrate that the site has been accredited to ANSI C63.4-2003 or later. A scope of accreditation indicating the accreditation by a recognized accreditation body to ANSI C63.4-2003 or later shall be accepted. Please indicate in a letter the previous assigned site number if applicable and the type of site (example: 3 metre OATS or 3 metre chamber). If the test facility is not accredited to ANSI C63.4-2003 or later, the test facility shall submit test data demonstrating full compliance with the ANSI standard. The Bureau will evaluate the filing to determine if recognition shall be granted.

The frequency for re-validation of the test site and the information that is required to be filed or retained by the testing party shall comply with the requirements established by the accrediting organization. However, in all cases, test site re-validation shall occur on an interval not to **exceed three years**. There is no fee or form associated with an OATS filing. OATS submissions are encouraged to be submitted electronically to the Bureau using the following URL;

http://strategis.ic.gc.ca/epic/internet/inceb-bhst.nsf/en/h_tt00052e.html.

If you have any questions, you may contact the Bureau by e-mail at <u>certification.bureau@ic.gc.ca</u> Please reference our file and submission number above for all correspondence.

Yours sincerely,

Bill Payn
