Tune-up Procedure

Tune up procedure over power range according to section 2.1033 (c) (9)

1. Pick up the transmitter RF signal by an inductive coupling loop placed close to the unit.
2. Connect the pick up device to the sensitive input of a radio communication tester
3. Adjust T1 for proper transmitter frequency
4. Adjust T4, T5, VC1 and VC2 for maximum output power
5. Adjust L3, L4, L6, L7, L8, for maximum output power while keeping harmonics at minimum.
6. Repeat steps d) and e) if necessary
