

Regarding Item 4....

After an internal review it appears that the installation instructions are in error. They do call out the 13 dB gain Yagi antenna in the section cited. ***We only call out the 6 dB gain as a compatible option in the compatibility chart.*** This will be corrected in the document and a new corrected copy provided. In addition it appears that this item was also incorrectly included on our web site as a compatible item. The incorrect references are being corrected.

Thanks,  
Bill Blum
