

YOU WROTE:

3) Please confirm that the emissions cited below are temporally related to the output so that the Duty Cycle can be applied as shown. Temporal relationships are often the case for emissions that are harmonics, but commonly is not the case for certain LO frequencies, some bandedge, etc. Please confirm the following frequencies are temporally related to the fundamental: (appx. 2373 MHz pages 13-14 and 17, 2507 MHz pages 40-41 and 48-49, 2379 MHz page 31).

I REPLY:

We confirmed here (using a Spectrum Analyzer w/ 0 Hz span setting as advised) that the temporal relationship is such that each of these frequencies follows the on-off pattern of the transmit frequency.
