## CFS8DLPHS8-US PC2 FCC COVER LETTER

Date: 05/22/2015

To Whom It May Concern:

This letter is to inform you of our request for a CLASS 2 PERMISSIVE CHANGE for our cellular radio module known as: CFS8DLPHS8-US. The change is to add a limited modular approval to the device grant which (1) removes the condition restricting sales, and (2) removes the restriction of end user removal/installation to OEM integrators only. The module will be used in Honeywell systems only, and this limited modular approval is to be applicable only in cases where it is operated in Honeywell host systems which are designed for this module and conform to its grant requirements. CFS8DLPHS8-US will continue to be operated under Parts 22H and 24E. There were no changes in the module's radiated emissions, occupied bandwidth, or class B radiated emissions. Justification for this request is presented in this letter and in the other application documents and exhibits. Description of the host device applicable to this request, authentication method, device photos, antenna gain requirements, and integration information can be found in the exhibits included with this application.

Regards,

x *Audrey Roussin* for MARK SCHMIDT
