Request for Modular Approval Request for Limited Modular Approval EUT Conditions Comply (Y/N
Request for Modular Approval Request for Limited Modular Approval
Requirements Single Modular Approval Requirements The radio elements of the modular transmitter must have their own shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
Single Modular Approval Requirements 1 The radio elements of the modular transmitter must have their own shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. 2 The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
The radio elements of the modular transmitter must have their own shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. The modular transmitter have their own shielding. The modular transmitter have their own shielding. The modular transmitter have their own shielding. The modular transmitter has buffered modular transmitter has buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
transmitter must have their own shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. 2 The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. 2 The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of

external to the shielded radio elements. 2 The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
inputs are provided) to ensure that the module will comply with Part 15 requirements under conditions of
module will comply with Part 15 requirements under conditions of
requirements under conditions of
The modular transmitter must have its The modular transmitter has its own
own power supply regulation. power supply regulation.
4 The modular transmitter must comply The antennas are permanently attached Y
with the antenna and transmission
system requirements of Sections 15.203,
15.204(b) and 15.204(c). The antenna
must either be permanently attached or
employ a "unique" antenna coupler (at
all connections between the module and
the antenna, including the cable). The
"professional installation" provision of
Section 15.203 is not applicable to
modules but can apply to limited
modular approvals under paragraph (b)
of this section.
5 The modular transmitter must be tested The modular transmitter is tested in a
in a stand-alone configuration, <i>i.e.</i> , the stand-alone configuration.
module must not be inside another
device during testing for compliance
with Part 15 requirements. Unless the
transmitter module will be battery
powered, it must comply with the AC
line conducted requirements found in
Section 15.207. AC or DC power lines and data input/output lines connected to
the module must not contain ferrites,
unless they will be marketed with the
module (see Section 15.27(a)). The
length of these lines shall be the length
typical of actual use or, if that length is
unknown, at least 10 centimeters to
insure that there is no coupling between
the case of the module and supporting

equipment. Any accessories, peripherals, or support equipment connected to the module during testing shall be	
module during testing shall be	
0 0	
unmodified and commercially available	
(see Section 15.31(i)).	
6 The modular transmitter must be The module is labeled with its	J
equipped with either a permanently permanently affixed FCC ID label.	
affixed label or must be capable of	
electronically displaying its FCC	
identification number.	
(A) If using a permanently affixed label, the	
modular transmitter must be labeled with its own	
FCC identification number, and, if the FCC	
identification number is not visible when the	
module is installed inside another device, then	
the outside of the device into which the module is	
installed must also display a label referring to	
the enclosed module. This exterior label can use	
wording such as the following: "Contains	
Transmitter Module	
FCC ID: XYZMODEL1" or "Contains FCC ID:	
XYZMODEL1." Any similar wording	
that expresses the same meaning may be used.	
The Grantee may either provide such a label, an	
example of which must be included in the application for equipment	
authorization, or, must provide adequate	
instructions along with the module which explain	
this requirement. In the latter case, a copy of	
these instructions must be included in the	
application for equipment authorization.	
(B) If the modular transmitter uses an electronic	
display of the FCC identification number, the	
information must be readily accessible and	
visible on the modular transmitter or on the	
device in which it is installed. If the module is	
installed inside another device, then the outside	
of the device into which the module is installed	
must display a label referring to the enclosed module. This exterior label can use wording such	
as the following:	
"Contains FCC certified transmitter module(s)."	
Any similar wording that expresses the same	
meaning may be used. The user manual must	
include instructions on how to access the	
electronic display. A copy of these instructions	
must be included in the application for	
equipment authorization.	
7 The modular transmitter must comply The module complies with all specific Y	Y
with any specific rules or operating rules applicable to the transmitter,	
requirements that including all the conditions provided in	
ordinarily apply to a complete the integration instructions.	
transmitter and the manufacturer must	
provide adequate instructions along with	
the module to explain any such	
requirements. A copy of these	
instructions must be included in the	
application for equipment authorization.	

8	The modular transmitter must comply	The modular transmitter complies with	Y
	with any applicable RF exposure	RF exposure requirements.	
	requirements in its final configuration.		

A limited modular approval may be granted for single or split modular transmitters that do not comply with all of the above requirements, *e.g.*, shielding, minimum signaling amplitude, buffered modulation/data inputs, or power supply regulation, if the manufacturer can demonstrate by alternative means in the application for equipment authorization that the modular transmitter meets all the applicable Part 15 requirements under the operating conditions in which the transmitter will be used. Limited modular approval also may be granted in those instances where compliance with RF exposure rules is demonstrated only for particular product configurations. The applicant for certification must state how control of the end product into which the module will be installed will be maintained such that full compliance of the end product is always ensured.
