

NORTHWEST EMC, INC.
22975 NW Evergreen Parkway, Suite 400
Hillsboro, OR 97124

November 10, 2005

Dear Application Examiner:

On behalf of GE Security Inc., Northwest EMC Inc is submitting this application for a Class II Permissive Change of their RCR-REX sensor, FCC ID: CGGAA2. The model numbers included in this application are RCR-REX-W, RCR-REX-G, RCR-REX-B. Each model number is identical except for a different colored plastic housing. The RCR-REX is a request to exit sensor that is part of a commercial/industrial facility access control system. The difference between the original RCR (range controlled radar) and the new RCR-REX is the number and spacing of shells used for a given range. This difference is discussed in detail in the Explanation of Class II Change RCR-REX Exhibit.

The RCR-REX operates in the 5725-5875MHz band as a 15.249 mobile device. It includes a non-detachable dipole antenna. This configuration satisfies the requirements of 47 CFR 15.203. The device is housed in a plastic enclosure. It is battery operated with no provision for connection to the AC mains either directly, or indirectly from another device.

The technical reports and exhibits demonstrate compliance with FCC rules 47 CFR 15.249. Your efforts in reviewing this application are greatly appreciated.

Best regards,

Northwest EMC, Inc.
