Letter of Specifying the Changes

Date: July 19, 2007

Federal Communication Commission
Equipment Authorization Division
Application Processing Branch
7435 Oakland Mills Road
Columbia, Maryland 21046

RE: Specifying the Change under FCC section 2.1043 (Class II Permissive Change)
FCC ID: CGJ3143EB

Measurement for Wireless LAN Module (Model: GC-131), which has been already granted by the FCC as FCC ID: CGJ3143EB according to FCC section 2.1043 changes in certified equipment (b)(2) Class 2.

Changes:

Model name of digital camera, which this modular transmitter is equipped

Pixel count of digital camera, which this modular transmitter is equipped, from 7 million to 8 million

Printing on camera body, which this modular transmitter is equipped

Since changes are only as described above, the shape and the dimension of digital camera and the location of antenna connection remain unchanged.

However, since there is a possibility of mutual interference due to high-density mounting between other circuits and the Wireless LAN Module (including the antenna), SAR test for the additional digital camera model was performed.

Please refer to the external appearance of the digital camera in the theory of operation.

Therefore, this modular transmitter is completely identical with the one, which has already been granted by the FCC as FCC ID: CGJ3143EB.

It is verified and confirmed that the equipment still complies with the FCC requirement after changes.

Thank you for your attention to this matter.
