KDB996369 Check List

FCC ID: CGJ4156EC

Applicant: Nikon Corporation

This transmitter complies with KDB996369 D03 as indicated below:

Modular approval requirement	Applicable	Not Applicable
2.2 List of applicable FCC rules	\boxtimes	
List the FCC rules that are applicable to the modular transmitter.		
These are the rules that specifically establish the bands of	Please refer to User	
operation, the power, spurious emissions, and operating	Manual	
fundamental frequencies. DO NOT list compliance to		
unintentional-radiator rules (Part 15 Subpart B) since that is not a		
condition of a module grant that is extended to a host manufacturer.		
See also Section 2.10 below concerning the need to notify host		
manufacturers that further testing is required.		
2.3 Summarize the specific operational use conditions		\boxtimes
Describe use conditions that are applicable to the modular		
transmitter, including for example any limits on antennas, etc. For		
example, if point-to-point antennas are used that require reduction		
in power or compensation for cable loss, then this information		
must be in the instructions. If the use condition limitations extend		
to professional users, then instructions must state that this		
information also extends to the host manufacturer's instruction		
manual. In addition, certain information may also be needed, such		
as peak gain per frequency band and minimum gain, specifically		
for master devices in 5 GHz DFS bands.		
2.4 Limited module procedures	\boxtimes	
If a modular transmitter is approved as a "limited module," then the		
module manufacturer is responsible for approving the host	Please refer to LMA	
environment that the limited module is used with. The	Letter and User	
manufacturer of a limited module must describe, both in the filing	Manual	
and in the installation instructions, the alternative means that the		
limited module manufacturer uses to verify that the host meets the		
necessary requirements to satisfy the module limiting conditions.		
A limited module manufacturer has the flexibility to define its		
alternative method to address the conditions that limit the initial		
approval, such as: shielding, minimum signaling amplitude,		
buffered modulation/data inputs, or power supply regulation. The		
alternative method could include that the limited module		
manufacturer reviews detailed test data or host designs prior to		
giving the host manufacturer approval.		
This limited module procedure is also applicable for RF exposure		
evaluation when it is necessary to demonstrate compliance in a		
specific host. The module manufacturer must state how control of		
the product into which the modular transmitter will be installed		
will be maintained such that full compliance of the product is		
always ensured. For additional hosts other than the specific host		
originally granted with a limited module, a Class II permissive		
change is required on the module grant to register the additional		
host as a specific host also approved with the module.		

		N-7
2.5 Trace antenna designs		
For a modular transmitter with trace antenna designs, see the		
guidance in Question 11 of KDB Publication 996369 D02 FAQ –		
Modules for Micro-Strip Antennas and traces. The integration		
information shall include for the TCB review the integration		
instructions for the following aspects: layout of trace design, parts		
list (BOM), antenna, connectors, and isolation requirements.		
a) Information that includes permitted variances (e.g., trace		
boundary limits, thickness, length, width, shape(s), dielectric		
constant, and impedance as applicable for each type of antenna);		
b) Each design shall be considered a different type (e.g., antenna		
length in multiple(s) of frequency, the wavelength, and antenna		
shape (traces in phase) can affect antenna gain and must be		
considered);		
c) The parameters shall be provided in a manner permitting host		
manufacturers to design the printed circuit (PC) board layout;		
d) Appropriate parts by manufacturer and specifications;		
e) Test procedures for design verification; and		
f) Production test procedures for ensuring compliance.		
The module grantee shall provide a notice that any deviation(s)		
from the defined parameters of the antenna trace, as described by		
the instructions, require that the host product manufacturer must		
notify the module grantee that they wish to change the antenna		
trace design. In this case, a Class II permissive change application		
is required to be filed by the grantee, or the host manufacturer can		
take responsibility through the change in FCC ID (new		
application) procedure followed by a Class II permissive change		
application.		
2.6 RF exposure considerations		
2.6 RF exposure considerations
