January 17, 2013

**TCB:**

During the FCC and TCB conference call in September 2012, the FCC stated that a WLAN device which has a SAR test must provide a "Tune-Up Procedure" to show what the maximum output power is. Please a document to show the rated/expected power of the WLAN. (Basically, we need to see that it was tested at maximum output power).

**Applicant:**

Rated power information and scaling is shown on pages 5 and 21 of the SAR report.
