

Operational Description

FCC ID: CH8A9080YYXX-07

The Westell® UltraLine II gateway is designed to deliver high speed data and high-quality, multicast IP video delivery over a variety of WAN access methods. The UltraLine II supports wireless 802.11b/g, Ethernet, and Coax networking interfaces and functions as a modem, enabling it to connect multiple PCs on your LAN to the Internet. The WAN interface on the UltraLine II allows it to uplink to ADSL networking devices. The 802.11 wireless interface establishes a secure wireless connection with mobile computing devices, and the digital Coax interface allows it to connect the UltraLine II directly to existing in-home coaxial cabling.

The 2.4 GHz antenna has a reverse polarity SMA connector on it. The antenna used is a 2 dBi monopole.
