Subject: Application to Cover Modular Approval of Toshiba WLAN  
With Three Different Antenna Types Installed only in Toshiba  
Designed Laptop Computers.

To Whom It may Concern:

We are requesting FCC certification of Toshiba designed laptop computers with the Toshiba WLAN and three different antenna types built into the computers. Although, the three antenna types were tested and test reports and documentation were submitted under this application, only one of the three antenna types, and not all three, will be installed in the Toshiba laptops and operate with this WLAN model at one time. The antenna types are as follows:

Types of Antennas:

1. Dual Film Antennas; located in the LCD
2. Film Antennas; located in the LCD
3. Stick-on Antennas; located under the keyboard

In support of your technical review, we have uploaded the following information:

- photos of the three antennas, the module and their location
- MPE Prediction for the antennas located in the LCD for the 20 cm distance to be maintained from the antennas to the User
- SAR Measurement Report for the antennas located under the keyboard
- RF Exposure Statement providing exposure information to the user which addresses both antenna locations
- other files, confidential and otherwise

We would greatly appreciate your timely review of this submission, as certification is required by Jan. 23, 2002.

Thank you for your understanding and anticipated cooperation. We are very much looking forward to working with you on this project.

Yours sincerely,

*i.V. Haberman*
