4.32[WINNF.PT.C.HBT] UUT RF Transmit Power Measurement

#	Test Execution Steps					
	Ensure the following conditions are met for test entry:					
	UUT has successfully completed SAS Discovery and					
	Authentication with the SAS Test Harness					
	 UUT has registered with the SAS, with CBSD ID = C 					
	UUT has a single valid grant G with parameters {lowFrequency					
	= FL, highFrequency = FH, maxEirp = Pi}, with grant in					
	AUTHORIZED state, and grantExpireTime set to a value far past					
1	the duration of this test case					
'						
	Note: in order for the UUT to request a grant with the parameters					
	{lowFrequency, highFrequency, maxEirp), the SAS Test Harness may need					
	to provide appropriate guidance in the availableChannel object of the					
	spectrumInquiry response message, and the operationParam object of the					
	grant response message. Alternately, the UUT vendor may provide the ability					
	to set those parameters on the UUT so that the UUT will request a grant with					
	those parameters.					
	UUT and SAS Test Harness perform a series of Heartbeat Request/Response					
	cycles, which continues until the other test steps are complete. Messaging for					
	each cycle is as follows:					
	UUT sends Heartbeat Request, including:					
	○ cbsdld = C					
2	○ grantId = G					
_	 SAS Test Harness responds with Heartbeat Response, 					
	including:					
	○ cbsdld = C					
	○ grantId = G					
	 transmitExpireTime = current UTC time + 200 seconds 					
	o responseCode = 0

#	Test Execution Steps	Results				
	Tester performs power measurement on RF interface(s) of UUT, and verifies it					
	complies with the maxEirp setting, Pi. The RF measurement method is out of					
	scope of this document, but may include additional configuration of the UUT, as					
	required, to fulfil the requirements of the power measurement method.					
3		PASS				
	Note: it may be required for the vendor to provide a method or					
	configuration to bring the UUT to a mode which is required by the					
	measurement methodology. Any such mode is vendor-specific and					
	depends upon UUT behavior and the measurement methodology.

Note: The total path loss for 3695MHz is offset with 12.6 dB, for 3600MHz is offset with 12.4 dB.

Duty Cycle factor:

Note: The duty cycle value is 74.4%, add 10log(1/duty cycle) to the measured power level to compute the average power during continuous transmission.
