Tune-up procedure / Parts list

Japan Radio Co., Ltd.

1. Tune-up procedure

1.1 AP

The transmitting output electric power is controlled to become +14dBm set at the factory.

1.2 WT

The transmission output electric power is controlled from the AGC switch and ASIC with the modulator through ATPC. The ATPC output is stabilized from AGC switch and ASIC set to become a prescribed output at the factory, and the gain is controlled with the modulator, and the output electric power has been stabilized. Moreover, the AGC switch and ATPC set the transmission output to the transmission output in 0.5dB step.
