Letter for Professional Installation

Date: February 23, 2012

Professional Installation

Model: NTG-525EUL
FCC ID: CKENTG525-EUL

To Whom It May Concern:

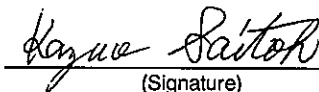

The NTG-525EUL is a wireless access system that meets the requirements of FCC Part 101 and that will be operated under the provisions of a license. The product can operate on wireless channels ranging from 24.563 to 25.431GHz with 20MHz symbol rate and from 24.577 to 25.417GHz with 40MHz symbol rate (frequency band: 24.549 to 25.445GHz) for the ITU Region 1. In the USA, the equipment may only operate on channels ranging from 25.064 to 25.236GHz with 20MHz symbol rate and from 25.078 to 25.222GHz with 40MHz symbol rate (frequency band: 25.050 to 25.250GHz), according to the table of frequency allocations of FCC 2.106.

The operation frequency setting is to be performed via software controls by a professional installer in accordance with the license specifications. This action will be handled by the company holding the license prior to providing the equipment to the final user, following instructions from Japan Radio Co., Ltd.

The operation channel setting will be protected by a password in the equipment control software. The password will not be made available to the final user. Therefore the final user of the product will not be able to change the equipment operation frequency. The equipment will thus only operate on authorized frequencies in the USA.

Sincerely,

By:
