Overview

Spacelabs Model 96281-x Transmitter is a patient-worn medical telemetry transmitter used to monitor a patient's ECG and other optional vitals in a hospital setting. The transmitter operates in the 608 - 614 MHz band under FCC Rule part 95. All models listed contain the identical radio circuit board. The device also contains a Bluetooth radio module used during manufacturing and service tasks. This radio will be approved under a separate application and bear FCC ID: CM6-WT12.
