To whom it may concern

The Spacelabs P/N 010-1927-00 (Bluegiga model WT12) is a Bluetooth radio module intended to be embedded in various Spacelabs' products.

The module requires original approval under the provisions of FCC 15.247, and modular approval as detailed in FCC 15.212 (please refer to our separate letter for a review of compliance with module requirements). We request the FCC ID number **CM6-WT12** for this module.

The module is self-contained, including a chip antenna. The first products in which the module will be embedded are the Spacelabs Model 96281-x05x transmitters, which are subject to a separate approval request (FCC ID number CM6-670-1187-608).

Sincerely,

A handwritten signature in black ink, appearing to read "S. J. Cantwell".

Stephen J. Cantwell
