Transmitting in the 5600-5650 MHz Band

To whom it may concern,

The Spacelabs product (FCC ID: CM6010-1471ABG) will not transmit beacons on DFS frequencies. It passively listens for an Access Point beacon in the 802.11a frequency bands.

The installed radio does not transmit on 802.11a Channels 120, 124, or 128 which fall within the 5600 – 5650 MHz band restriction.

This operation has been confirmed through the DFS test activities shown in Compliance Certification Services, Test Report No. 08U12201-1, dated January 30th, 2009. The CCS test report is part of the radio application package for FCC ID: CM6010-1471ABG.

Sincerely,

A handwritten signature in black ink, appearing to read "S. J. Cantwell", written over a horizontal line.
