RE: FCC ID: CN2EPHA-90

Attention: Gregory M. Snyder / Brian J. Dettling

I have a few comments on this Application.

1. Please explain how the FCC ID label is permanently affixed to the device.
2. The measured power of this device is 450mW. While this device is most likely an occupational environment device and would require 833mW before SAR was required, some explanation of the rf exposure compliance must be made (even a statement of compliance to the occupational environment exposure limits). This would also need to be in the manual. Please provide some rf exposure information for this device operating in an occupational environment.
3. Please provide a parts list and a tune up procedure for the transmitter.

Dennis Ward

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
